Propane a necessity here

The loss of propane would be a disaster. We lose power 5-10 times per year from 1-8 days at a time. Our home and out buildings would burn down without our water well available which is powered by our propane fueled generator. Our crops on the property would fail without water. Our stored product would spoil without cooling. We would have to abandon our home when the power goes out in the winter. Propane is used for short periods at a time but it is the difference between life and death to us. Banning propane is a very bad idea when electrical is proven to fail us.
