Don't eliminate propane useage

I am a homeowners and propane consumer. It is by and far more energy efficient for me to use propane than electricity. Also, my home is not conducive for solar panels and I am not in a position nor do I want to make modifications to my home in order to use solar. I also do not believe California's infrastructure will allow for the state to go all electric. We can't handle the pull on the grid today without having to have involuntary blackouts - which have created disruption to my business, creating lost chargeable time. Doesn't the state have bigger priorities to tackle?
