Eliminating propane usage is short sided

To eliminate propane is short sided. Electricity delivery is increasingly unreliable and as a result many people that live outside city limits throughout california have resorted to propane fired generators. What do you suppose these people do for power if the legislature outlaws propane? Does the legislature plan on expanding the delivery of natural gas? We have solar but it is inadequate to supply power 24/7/365. This is a ridiculous proposition that is so narrowly focused its mind boggling. How many people live in rural areas of california?
