## **Propane for the future**

I would urge the CEC to reconsider the goal to be only electricity powered homes in the near future. As with the new mandate to sell only electric powered vehicles by 2035 - going green already has its problems - ie, power shortages in the afternoon since you have not permitted any peaker power plants once the sun is past 3pm and the power output on solar is now declining. Same for wind power - there are windless days. Oh yes, battery banks for cloudy days, evenings & nights - only a \$50K investment. Propane will provide heat and flame for cooking regardless of the weather. This blanket change is not infrastructurally supported - if mandated, our utilities will only raise our rates to pay for compliance. Our state is already one of the most expensive - you will achieve your goal and people will leave...hmm, fewer taxpayers, less revenue. I get it, get rid of the poor, only have the rich in CA. Brilliant move!  
We get what we ask for.
