## **Retain public access to propane**

Eliminating home access to propane would be create a definite hardship at my residence. Not only do my hot water and stove operate on propane, but so does my whole house generator. I've just experienced a four-day power outage: the generator made it possible for my freezer and refrigerator to function. In these days of unreliable service by PG&E, and regular wildfires, it's a mystery to me why this would even be under consideration. We need access to all the power sources we can get.
