Propane use for home energy

The use of propane is a viable energy alternative in my California home. I use it primarily for home heating and for hot water in my tankless water heater. It is a source of clean, safe, and inexpensive energy. It's elimination for home use would be a mistake that would be another burden for Californians to bear. Please be sensible about this and not make electrical energy, no matter how it's generated, monopolize our energy source and subject all Californians to the burden of more expensive energy and at the mercy of brown outs because of a lack of alternatives for energy use.

Thank you for considering this.
