## **Green EconoMe Comment on 2022 Energy Code Pre-Rulemaking**

To whom it may concern:

We feel strongly that the next code should focus on electrification of all new buildings and for fuel switching for existing buildings.

We support a single electric baseline for all buildings. We benchmarking hundreds of buildings and find that high gas usage does cause a lower Energy Star Score.

We support a just transition from fossil fuels with policies that protect workers and low income communities.

We must convert over immediately to all electric buildings, as it is clear our planet is screaming out for our help!!

Thank you,
