### **Docket 19-BSTD-03**

I am a current user of Propane at my residence and am at a loss why everyone is trying to shut it down and force people to use Electric Power if Natural Gas is not available. At a time when there is not enough power available are we not subjected to more blackouts. With Heating using electric is not very efficient as I have used heat pump before, cooking cannot be done without power as using wood is already banned in most areas. Cost is skyrocketing each day with energy usage and the commission trying to ban Propane use we all will be under their thumbs or maybe that is the ultimate goal. Propane provides power to millions of people where electric is not available and very reliable. With continued use of Solar, Propane use for backup power is great due to loss of unreliable delivery of Electric Power by the Utilities. I urge the commission to reject banning use of Propane as it is our lifeline when alternative utility is not available.
