<b>Docketed Date:</b>	10/8/2020

## **Attachment – Response to Section C.3. and D.2.**

*C.3. What are the total statewide benefits from this regulation over its lifetime?*

*D.2. Summarize the total statewide costs and benefits from this regulation and each alternative considered:*

This regulation is expected to have insignificant statewide benefits over its lifetime. The only impacts are in regards to the certification of appliance data to the CEC. Due to the proposed repeal of the requirements for self-contained lighting controls, manufacturers of this appliance will see a small cost savings since they will no longer have to certify these products to the CEC. There is no cost to certify models, but the savings will come from time spent on certification (estimated to be about 2 hours per year for each regulated appliance type). However, manufacturers of miscellaneous refrigeration products will now be required to certify data to the CEC. As a result, these manufacturers will now each spend about 2 hours per year on certification for each regulated appliance type. It is worth noting that there are less than ten manufacturers located in California for each of these appliance types: self-contained lighting controls and miscellaneous refrigeration products.
