## **California and the US must end the use of natural gas, esp for building heating**

The climate and health threats require all-electric high efficiency heat pumps and induction stoves now to eliminate polluting natural gas in buildings. The terrible health dangers of cooking with gas have been exposed. And we're beginning to realize that natural gas (methane) leaks are much greater than thought. The natural gas system is a hundred years old and requires extensive repair work (which PG&E is already misguidely working on.) The CEC must go all electric now in the 2022 code. California and the world can't wait to 2025.
