2022 Code must be all-electric

The CEC must seize this opportunity to further the next clean energy revolution in California: build more housing faster, make it more affordable to live in, clean up the air, and mitigate the climate crisis. The time to act is in the 2022, not the 2025, building code update. Waiting three more years would cost Californians \$1 billion in unnecessary gas infrastructure, and lock them into 3 million tons additional carbon emissions by 2030. The climate and health threats require all-electric high efficiency heat pumps and induction stoves now to eliminate polluting natural gas in buildings. The terrible health dangers of cooking with gas have been exposed. The CEC must go all electric now in the 2022 code.
