All Electric Building Codes are Essential

We need to prepare for the renewable grid by adopting all-electric building codes. Benefits, of course, include reduced building sector carbon emissions, improved health and air quality, increased affordability for consumers, reduced utility, customer costs and investor risk, and additional support for the advanced electric technology market and local governments. But it also needs to happen now (not in a future) cycle, because it will still take awhile for these codes to be adopted. We cannot wait any longer - the climate crisis is here and I want to be able to reliably look at stores I'm shopping in, city buildings I'm visiting or home that I want to buy and reliably know that it's built with the future grid in mind. Don't make this harder on me: the consumer!
