We need stronger building regulations Now!

As a building engineer concerned with public health and sustainability, the single greatest aid in our fight to design, construct and operation better buildings is the code. Please strongly consider an aggressive phase out of fossil fuel / non renewable combustion in commercial buildings and eliminate fossil fuel / non renewable combustion for low rise and mid rise residential buildings, and no combustion in living areas for high rise residential. Please also include requirements that all buildings must undergo embodied carbon analysis and fall under a cap of 500 kg CO₂e/m². A similar compliance system to T24 should be set up for embodied carbon as well.
