EIR SCOPE GOSBGF

I recommend that the EIR for the GREAT OAKS SOUTH BACKUP GENERATING FACILITY not be restricted to evaluating the environmental impact of this one site. The EIR needs to take into account the China Mobile site directly across the street as well as the Equinix sites already operational just a half mile away from this proposed site. There are three Equinix data centers currently operational and one more nearly completed just a half a mile from this proposed site. Additionally, directly across the street from this proposed site is a China Mobile data center under construction. An EIR needs to take into account the environmental impact of all the data centers in immediate location of each other.
