IAQ Workshops, Healthy Kitchen Ventilation Best Practices presentation

A presentation summarizing the best practice guide for ducted range hoods in new and existing buildings from ROCIS.org, and highlights from research studies, was presented at the North American Passive House Network conference in December, 2018. The guide was developed in 2017 and updated in early 2019 to promote good kitchen ventilation and low emission cooking practices, rather than wait for the ASTM standard test method, HVI test procedures, and building standards for range hoods to be finalized.

The file is too big to upload to the Docket site, so I have made it accessible for download at https://drive.google.com/file/d/1CDxq8AAkQGOtWXu2KvTxU6Ru8yNKR___/view?usp=sharing

Please consider these recommendations in revising Title 24 standards, compliance manuals, and training materials.

Thank you,

Thomas J. Phillips
