We use HID lighting 14 1000 watt lights for short periods to grow our plant from clone stage to plantable size for our mixed light green houses. we use less than 200 watts of LEDs to extend our light per green house when planted. We have 5000 square foot of canopy, We generate our own electricity with a combination solar/generator hybrid system. To mandate the use of LEDs only on our farm adds one more expense on smaller farmers who already do a good job on conserving everything they can to compete in a tough market.
