The state should set a more ambitious goal for clean energy

Climate change is accelerating rapidly, and the current goal set by SB100 of 100% clean electricity by 2045 is not ambitious enough to deal with this pressing issue. The state should commit to 100% clean electricity by 2030. I grew up in Southern California and am currently a student at UCLA, and I have experienced the effects of climate change first hand by the devastating wildfires that have become a routine occurrence where I live. We need to commit to 100% clean electricity in order to mitigate the effects of climate change so that we can have a safer future. Taking the step to amend the SB100 bill and updating the goal of 100% clean energy from 2045 to 2030 is vital for protecting our planet and our people, because we do not have 25 years to wait to deal with the pressing issue of climate change.
