We can't wait around for 100 % clean renewable energy by 2045 !

Hello, my name is Alexander Gonzalez, I am a student at UCI and I wanted to bring to your attention the necessity for renewable electricity by 2030. As the Energy Commission of the state, I believe it's in your best interest to aim towards having clean renewable electricity by the year 2030. We have seen a great number of devastating effects that non-renewable resources have already done to areas all throughout California. I specifically have family members who have had to move in search of a new home because of wildfires causing a great amount of destruction. The consistency of how often we've had wild fires should be something that is not ignored and instead combated to ensure the smoke derived from the fire to not be hazardous for our climate. Our generation will be the ones left with all these devastating impacts if the push for Renewable energy is not put in place sooner than later.
