Infection and Mortality by Race and Ethnicity

We compute the number of cases and deaths relative to population size for each race and ethnicity. This information helps identify which people are disproportionately being impacted by COVID-19 in every state.
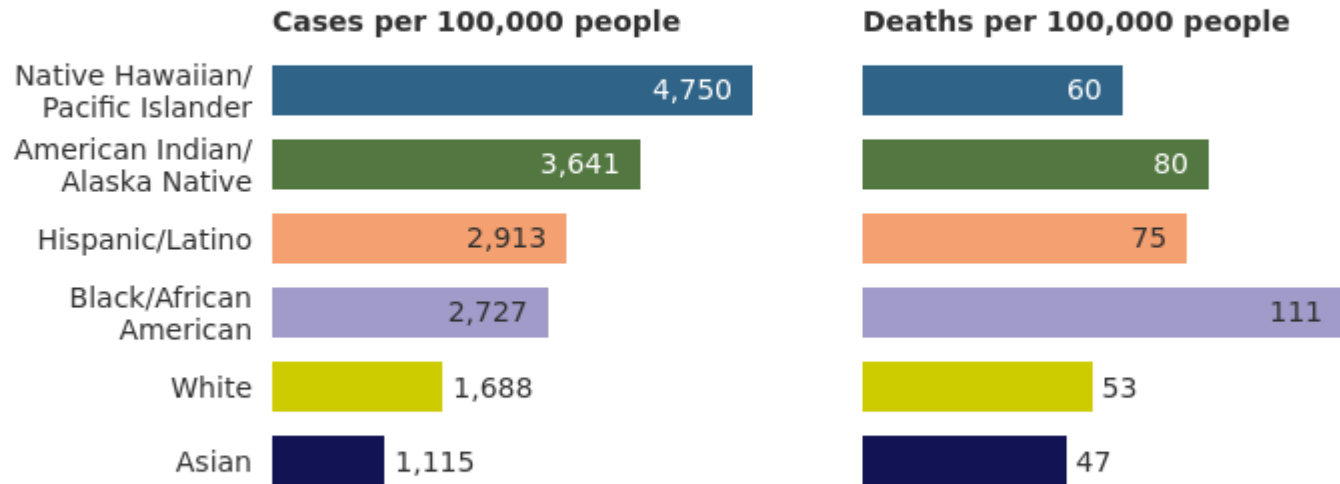

See the per capita data by state

Select a state or territory to see the latest information about COVID-19 cases and deaths per 100k people for each race and ethnicity. These charts are updated twice per week and use standard Census categories for race and ethnicity.

The data shown in these charts are reported by the state or territory and do not include those with race classified as "Other" or "Two or more races." Hispanic or Latino ethnicity may include any race.

State or territory   **REQUIRED**

United States

In the **United States**, through November 19, Native Hawaiians/Pacific Islanders were most likely to have contracted COVID-19. Black/African American people were most likely to have died.

Cases per 100,000 people

Native Hawaiian/Pacific Islander	4,750
American Indian/Alaska Native	3,641
Hispanic/Latino	2,913
Black/African American	2,727
White	1,688
Asian	1,115

Deaths per 100,000 people

Native Hawaiian/Pacific Islander	60
American Indian/Alaska Native	80
Hispanic/Latino	75
Black/African American	111
White	53
Asian	47

Notes: Nationwide, 51 of 56 states and territories report race/ethnicity information for cases and 50 of 56 report race/ethnicity for deaths. Graphic includes demographic data from all states and territories that report, using standard Census categories where possible, and scaled to the total US population for each Census category. Race categories may overlap with Hispanic/Latino ethnicity. Some rates are underestimated due to lack of reporting of race and ethnicity categories for COVID-19 cases and deaths.
