COMMITTEE WORKSHOP

BEFORE THE

CALIFORNIA ENERGY RESOURCES CONSERVATION AND DEVELOPMENT COMMISSION

In the Matter of:

Proposed Amendments - Phase II Home Energy Rating System Program Regulations Docket No. 08-HERS-2

CALIFORNIA ENERGY COMMISSION

HEARING ROOM A

1516 NINTH STREET

SACRAMENTO, CALIFORNIA

WEDNESDAY, OCTOBER 15, 2008

10:00 A.M.

Reported by: Peter Petty

Contract No. 150-07-001

1	PROCEEDINGS
2	10:00 a.m.
3	PRESIDING MEMBER ROSENFELD: Good
4	morning. Welcome to HERS. I'm Art Rosenfeld; I'm
5	going to be presiding for today on behalf of the
6	Efficiency Committee. On my right is Commission
7	Chairman Jackie Pfannenstiel, who is the Associate
8	Member of the Committee. On my left is David
9	Hungerford, my Senior Advisor.
10	And I think I'll get the staff to
11	introduce themselves, starting with Bill
12	Pennington.
13	MR. PENNINGTON: Good morning, I'm Bill
14	Pennington.
15	MR. MAEDA: Bruce Maeda.
16	PRESIDING MEMBER ROSENFELD: And
17	welcome. I think we might go directly to Helen
18	Lam, who is going to officially welcome us and
19	tell us where the exits are.
20	MS. LAM: Sure. Good morning,
21	everybody. Thank you for coming to the California
22	home energy rating system of the HERS program,
23	phase II rulemaking hearing.
24	My name is Helen Lam and I'm the Project

25 Manager for the HERS contract, and also

- facilitator of this meeting.
- 2 Before I kick off today's meeting I want
- 3 to quickly go through some of the standard
- 4 housekeeping items. For those of you who may not
- 5 be familiar with this building, first of all the
- 6 restrooms are located out the door to your left.
- We also have a snack bar up on the second floor.
- 8 And in the event of any emergency and
- 9 the building is evacuated, please follow our
- 10 employees to the appropriate exits. We will
- 11 reconvene at Roosevelt Park, which is located
- diagonally across the street from this building.
- 13 Please proceed calmly and quickly, again following
- 14 the employees with whom you're meeting, to exit
- 15 the building.
- This meeting is the Efficiency
- 17 Committee's public hearing regarding proposed
- 18 amendments to the HERS regulations related to
- whole house energy ratings for existing and newly
- 20 constructed homes.
- 21 We refer to this as phase II of HERS,
- 22 which expands the existing program to include the
- 23 California HERS index calculations, utility bill
- 24 analysis, cost effectiveness of energy efficiency
- 25 measures, and whole house energy ratings, and

1 certifications of different individuals and

2 entities that would be involved in the California

3 HERS program.

The Committee will take public comments during today's meeting. As you can see on the agenda we will have the public comment period following the staff's presentation. And we ask that anyone wishing to make comments to fill out one of these blue cards so that we may advise the Presiding Member as to who needs to speak.

When you come up to the podium to speak, each time please state your name and organization. This is for the benefit of the court reporter.

And if you have a business card, please hand it to him, as well, to insure that your name is spelled correctly.

There are copies of the hearing agenda and today's presentation available in the foyer.

We also have a limited number of copies of today's efficiency hearing notice and the notice of proposed adoption on the table.

There are display copies of the express terms and the HERS technical manual for your reference, as well. Please do not remove the display copies, as these and all other rulemaking

documents, including today's presentation, are
available online.

The rulemaking documents include the notice of proposed adoption, the initial statement of reasons, the express terms and the HERS technical manual, which will be incorporated by reference.

This meeting is being recorded, and the transcript will be posted online within two weeks. Today's meeting is also being broadcast over the internet. Anyone wishing to participate by telephone call, please call 1-888-282-0366; the passcode is HERS and the call leader is Helen Lam.

Today's meeting is for the Committee to consider possible amendments related to the HERS proceeding. The 45-day public comment period with respect of the HERS phase II rulemaking started on October 3rd. We will accept comments up to 10:00 a.m. on November 19th, which is the scheduled day for possible regulations adoption by the Energy Commission at its November 19th business hearing.

Modification to the 45-day language may be required, and the modified text or the 15-day language will be made available at least 15 days prior to the noticed Energy Commission adoption.

1 The earliest possible adoption date for the 15-day

- 2 language is at the December 17, 2008 business
- 3 meeting.
- 4 Now, I will turn the meeting over to
- 5 Rashid Mir of the HERS program staff who will walk
- 6 us through the presentation slides.
- 7 MR. MIR: Good morning. My name's
- 8 Rashid Mir with the buildings and appliances
- 9 office. This is the presentation. I'm going to
- 10 start with the scope and application section.
- 11 The HERS regulations and HERS technical
- 12 manual specify the requirements for ratings and
- 13 audits. We need to consistently rate occupied and
- 14 unoccupied homes. Occupants should be considered
- in developing the recommendations.
- 16 The objective of this rulemaking is to
- 17 complete the implementation of the HERS program
- 18 pursuant to Public Resources Code section 25942.
- 19 Public Resources Code section 25942
- 20 requires ratings based on a single statewide
- 21 rating scale; it requires estimates of potential
- 22 utility bill savings; requires recommendations on
- 23 cost effective measures to improve energy
- 24 efficiency; and requires labeling procedures.
- There are many cost effective energy

1 efficiency improvements for homes that are built

- before and after the start of the building
- 3 standards in California.
- 4 This graph from Loren Lutzenhiser shows
- 5 a large variation in energy use in existing homes.
- The next section will be on the HERS
- 7 reports. This is the sample rating certificate.
- 8 Score zero on the right side indicates the best
- 9 energy performance. And a score of 250 on the
- 10 left indicates poor energy performance.
- 11 The home on this sample certificate has
- 12 a score of 155, and a standard home would have a
- 13 score of 100.
- The rate includes the Title 24 energy
- uses, and it also includes lighting, appliances
- and exterior lighting attached to the building.
- 17 Exterior energy uses not attached to the building,
- 18 such as landscape lighting, would be evaluated in
- 19 the recommendations.
- 20 If the home has onsite renewable
- 21 generation two ratings will be produced, showing
- the building's energy efficiency features and
- 23 without the -- and with the onsite renewable
- energy.
- 25 The standard approach for rating

1 recommendations is required. The rater can use

- the optional custom approach to tailor
- 3 recommendations for the homeowner.
- 4 California home energy audit is the
- 5 first five steps of -- first five out of seven
- steps of the whole house home energy rating. This
- 7 is a sample home energy audit certificate. It has
- 8 the same information as the rating certificate.
- 9 The only thing that's missing is the index.
- 10 Next group of slides will be on energy
- 11 modeling. The California HERS index is the ratio
- of the time-dependent valued energy use of the
- rated home to the TDV energy use of the reference
- home.
- 15 If the rated home is larger than 2500
- square feet, the TDV energy for the reference home
- shall be based on a reference home size of 2500
- 18 square feet.
- 19 Emissions of greenhouse gases associated
- 20 with the energy consumption for the home shall be
- 21 estimated in the HERS reports.
- 22 The HERS system modeling rules are based
- on the 2008 residential alternative calculation
- 24 method approval manual. However, HERS ratings
- will include lighting and appliance energy uses

```
1 that are not included in the standards.
```

12

13

14

15

16

- The HERS equipment energy use is

 estimated based on the RASS 2004 survey of

 existing homes. Most of the, you know, plug-in

 equipment will move with the occupants when the

 occupants move.
- Similarly for lighting. Most table

 lamps and floor lamps are going to move with the

 occupants at change of occupancy. The HERS

 lighting energy use is also estimated based on the

 RASS 2004 survey of existing homes.
 - Next section will be on rating recommendations. Reasonable estimates of potential utility bill savings and reliable recommendations on cost effective measures to improve energy efficiency are required by Public Resources Code section 25942.
- The red text indicates significant

 changes since the August hearing. The standard

 approach shall evaluate measures in the listed

 groups starting with building envelope measures

 and then move into the next group of measures.

 All measures within a group shall be ranked.
- The standard approach recommendations
 shall include all measures that are cost

effectiveness on the needs of the homeowner.

L	effective.	The	custom	approach	can	base	cost

2

11

12

13

14

15

16

17

18

19

21

The standard approach cost effectiveness
uses an after-tax cash flow method. The original
basecase is the home with the high annual energy
costs. For each measure the after-tax cash flow
is based on the reduced annual energy costs, the
increased annual mortgage payment due to the
installed cost, and a lower tax amount based on
the increased mortgage payment.

The custom approach cost effectiveness should be based on the homeowner, and can include nonenergy benefits.

The utility rates for the standard and custom approaches will be the most common rates for the actual rates for a home or the most common rates in that area. And it shall be the same for the standard and custom approaches.

That's the end of the slide show.

20 PRESIDING MEMBER ROSENFELD: Okay. Oh,

Chairman Pfannenstiel has some remarks.

22 ASSOCIATE MEMBER PFANNENSTIEL: Just 23 actually a question.

The scale that we ended up with, the sort of backward scale from zero to high numbers

1 with zero being good and high numbers being bad, I

- 2 remember at our last hearing we spent a lot of
- 3 time talking about various possible scales.
- 4 How did we -- could you just remind me
- 5 of the rationale for that one?
- 6 MR. PENNINGTON: Sure. The basic
- 7 underlying idea of the scale parallels the
- 8 development of HERS ratings at the national level,
- 9 both the RESNET program developed the scale, you
- 10 know, and got buy-in from the mortgage industry
- and other states that are doing ratings.
- 12 Kind of a separate acknowledge of this
- 13 scale or, you know, endorsement of the scale came
- 14 from DOE in setting their high-efficiency
- 15 buildings program that they're working with home
- builders around the U.S. related to that.
- 17 One of the comments that we got at the
- 18 last workshop was that -- was how big of a range
- should the scale be. And at the last workshop we
- 20 were proposing to have a scale that went between
- 21 zero and 150. And there was quite a bit of
- comment that you may get a fair portion of all the
- 23 buildings that exist that have scores higher than
- 24 150. And so perhaps that is not the appropriate
- 25 place to cut it off.

So one of the things we did in response
to those comments was to lengthen the scale so it

- 3 would go out to 250. That's expected to capture
- 4 the vast majority of existing buildings.
- 5 ASSOCIATE MEMBER PFANNENSTIEL: And when
- 6 you say that this scale parallels those being
- developed nationally, do you mean it's the same
- 8 concept as to the backward --
- 9 MR. PENNINGTON: Yes.
- 10 ASSOCIATE MEMBER PFANNENSTIEL: -- set
- of positive numbers?
- 12 MR. PENNINGTON: Yes, with zero being
- 13 what we're trying to shoot at in terms of getting
- 14 to zero energy. And code level buildings being
- 15 assigned a score of 100. And then calculating the
- score for higher energy using buildings based on
- 17 those two points is how the scale is derived.
- 18 ASSOCIATE MEMBER PFANNENSTIEL: Thank
- 19 you.
- 20 PRESIDING MEMBER ROSENFELD: Any other
- 21 comments? David?
- So, I guess we start with public
- 23 comment. And the first one I have is from Jeff
- 24 Chapman from California Living and Energy. Good
- 25 morning.

MR. CHAPMAN: Thank you very much. In
the process of rulemaking there's lots of work
being done by Commission Staff and those of us who
attend the workshops. And there's also a lot of
information that gets promulgated throughout the
industry. And my question addresses more the
issue of the information being promulgated than
actual fact, possibly.

As you view all of this, Commissioners, and you look at utility companies and IOUs, one of the things that's been suggested is that building performance contractors or California whole house home energy raters and California home energy inspectors might have preference in utility companies' minds for payments for work being done, as opposed to just the HERS rater.

Have you heard anything about that? Or is that feasibly even possible?

MR. PENNINGTON: What we've been trying to do here is build a structure that would allow several different possible delivery mechanisms for ratings. And so each of the ones that you mentioned are services tat exist in the marketplace now that we're trying to bring under one umbrella and have reasonable standardization

```
1 across what those people are doing and quality
```

- 2 control and collection of data in a consistent
- 3 way. And attempting to meet the statutory
- 4 requirements of consistent ratings and reasonable
- 5 recommendations on cost effectiveness.
- And so we're trying to set up a
- 7 mechanism where all of those entities can have a
- 8 role as we proceed.
- 9 It's our expectation that in the future
- 10 utility incentives programs, or perhaps other
- 11 kinds of incentives programs or recognition
- 12 programs, would value having a California home
- energy rating through one of these service
- 14 providers. And that that would qualify homes for
- incentives down the line.
- But I don't know if I can go beyond that
- 17 and, you know, respond to your rumor question, you
- 18 know, I --
- MR. CHAPMAN: Yeah, and unfortunately
- 20 this is the kind of thing that happens, you know.
- 21 And when you're in your office an hour and a half
- 22 away from here, and you see emails that are
- propagated, you don't know if it's actual, factual
- or not. So I just asked the question. And I
- 25 appreciate your answer.

	_
1	And what I heard you say is, indeed, as
2	I read, there will be three opportunities for
3	homeowners to use a rater as long as not only the
4	HERS rater, but the other two, are certified by a
5	provider. And that they, in their certification,
6	they meet the standards needed for construction
7	and everything else.
8	And that those could be used. And that
9	the Commission would prefer that those three
LO	options be used, and no preference being given to
L1	any two or one.
L2	MR. PENNINGTON: Correct.
L3	MR. CHAPMAN: Thank you very much.
L 4	Appreciate your time.
L5	PRESIDING MEMBER ROSENFELD: Thank you.

16

17

18

19

20

21

22

23

MR. MAEDA: Bruce Maeda, Energy Commission Staff. I want to point out that actually raters are involved in all three of the models that we've mentioned.

The building performance contractors, in order to be part of this program, must be raters, must be trained as raters and certified as HERS raters, and QA'd by HERS providers.

24 HERS raters also must supervise home inspectors and essentially sign off on the rating 25

```
1 if they actually develop a HERS rating and index.
```

- 2 So HERS raters are involved on every single one of
- 3 these business models.
- 4 MS. LAM: This is just to let the
- 5 speakers who are coming up to be sure to speak
- 6 into the mike to assure that everybody in the room
- 7 can hear them. Thank you.
- 8 PRESIDING MEMBER ROSENFELD: Bob Knight
- 9 has a blue card. Whoops, after Helen told me to
- speak into the mike, mine was off. I'm sorry.
- 11 (Laughter.)
- 12 PRESIDING MEMBER ROSENFELD: Bob Knight
- has a blue card.
- MR. SPEAKER: He's actually online.
- 15 ASSOCIATE MEMBER PFANNENSTIEL: Oh, he's
- online.
- 17 PRESIDING MEMBER ROSENFELD: He's
- 18 online?
- MR. SPEAKER: Yes.
- 20 PRESIDING MEMBER ROSENFELD: Oh, okay.
- 21 (Pause.)
- MR. PENNINGTON: Can you have the
- operator request him to speak?
- 24 MS. LAM: Chang, can you just have the
- 25 caller to just speak?

```
1 MR. KNIGHT: This is Bob Knight.
```

- 2 PRESIDING MEMBER ROSENFELD: Good
- 3 morning.
- 4 MR. KNIGHT: I don't have a lot of
- 5 comments to make today or questions. I'm going to
- file written comments.
- 7 I just want to make just one comment
- 8 about the rating scale. I think it's an
- 9 improvement to have at 250 instead of 150. You
- 10 know, looking at it it makes me think that that
- logically is going to make a lot of people think
- their house is a little better than it is because
- it's going to be just closer to the middle than it
- 14 would be if the rating scale were only at 150 or
- 15 something less than 250.
- 16 If you just think about sort of the
- middle ground, I'm not sure that's what you get,
- 18 somewhere around 200; whether it actually makes
- 19 any sense or it will make any difference to have
- the ceiling go any higher.
- 21 PRESIDING MEMBER ROSENFELD: Bill
- 22 Pennington, do you -- I'm sorry, did we cut you
- off in mid-sentence, Bob? Go ahead.
- MR. KNIGHT: Just one broader comment.
- 25 I'm going to elaborate on this in my written

```
1 comments. I do have a continuing concern that we
```

- 2 have over-specified what contractors and raters
- 3 are going to have to do that will lose an awful
- 4 lot of flexibility from the prospects.
- 5 But rather than spend any time on that
- 6 today, I'd like to give it a little more thought;
- 7 read the regs a little bit more closely; and
- 8 follow up with comments.
- 9 PRESIDING MEMBER ROSENFELD: Does staff
- 10 want to make any comments on the proverbial zero
- 11 to 250 scale?
- 12 Bob, I guess we've addressed that in
- 13 Bill Pennington's answer to Chairman Pfannenstiel.
- MR. KNIGHT: Yes, I don't really need an
- answer. I just wanted to make that comment.
- 16 PRESIDING MEMBER ROSENFELD: Okay.
- 17 Thank you very much, Bob.
- The next blue card is from Erik Emblem
- 19 -- I hope I'm pronouncing it correctly -- from
- 20 the Joint Committee on Energy and -- can't read
- it. You'll finish reading for me.
- MR. EMBLEM: Can't read my writing?
- 23 I'll finish for you, Mr. Chair.
- 24 My name is Erik Emblem and I'm a private
- 25 consultant with Three 3 International. And I'm

1 here today representing the Joint Committee on

- 2 Energy and Environmental Policy. This is a joint
- 3 committee that was formed by the California Sheet
- 4 Metal and Air Conditioning Contractors National
- 5 Association and the California Local Unions of the
- 6 Sheet Metal Workers.
- 7 And I'm here today to speak in favor of
- 8 the proposal as it sits, and commend staff and the
- 9 support people that put this together.
- 10 I think our comments are that we think
- this is a good, a really good start at addressing
- 12 the residential field and energy, and looking at a
- 13 whole house concept. And that there should be
- some achievable energy savings.
- 15 Another thing I'd like to point out, as
- with any regulation that you prompt, and that is
- 17 consistency and uniformity of enforcement. And
- 18 you'll probably hear that ringing from me at other
- 19 hearings, too. But our contractors support these
- 20 things and they just usually are concerned about
- 21 when they're implemented, how they're going to be
- 22 enforced. And with some of the other codes, not
- just energy codes, but it depends on which code
- 24 authority and where you're at in the state and how
- 25 they're applied.

1 So, again, we commend you. I think it's

- 2 a great effort by Bill and the staff. And if
- 3 there's some things we can do to help you further
- 4 this along, we volunteer.
- 5 Thank you, Mr. Chairman.
- 6 PRESIDING MEMBER ROSENFELD: I'm sure
- 7 the staff thanks you. Excuse me while I get my
- 8 cards in order here.
- 9 George Nesbitt from CalHERS. Good
- 10 morning, sir.
- MR. NESBITT: Good morning. George
- 12 Nesbitt representing CalHERS. We represent the
- independent third-party raters in California.
- 14 I want to address a couple of the issues
- 15 surrounding building performance contractors. We
- 16 believe allowing the building performance
- 17 contractor to provide an index on jobs that they
- 18 do work is a conflict of interest. It's not
- 19 consistent with how we treat new homes.
- 20 And as the Energy Commission has opened
- 21 up hearings against Masco for alleged violations
- 22 of conflict of interest, with hearings set in both
- November and December, you know, it's something we
- 24 care deeply about.
- 25 California, believe it or not, is

1 actually a leader on the subject of conflict of

2 interest. RESNET allows a contractor to also be a

- 3 rater as long as they disclose. Whereas we
- 4 prohibit. And apparently some of the other states
- 5 kind of actually follow our rule. And they're
- 6 actually looking at us to see whether we hold to
- 7 that.
- 8 So we have the opportunity to maintain
- 9 that leadership position in the rest of the
- 10 country when it comes to the existing home market.
- 11 And as someone who is actually a building
- 12 performance contractor, also, I see value in
- 13 having an independent third-party rater overseeing
- 14 my work. And since the regulations call for only
- 15 5 percent verification, you know, I imagine that -
- you know, I'd propose that we have raters do at
- least one in seven, which is a lot more than 5
- 18 percent.
- 19 The other issue that I don't think has
- 20 been addressed with building performance
- 21 contractors is the issue of contractor licensing.
- Do they have to be a licensed contractor? Do they
- 23 have to be properly licensed for the work they do?
- 24 Because there are those that aren't, and haven't
- 25 been.

1	Also, back on the issue of index, and
2	another possible solution to it is allowing
3	building performance contractor to do the audit,
4	but only allow the index be done at the program
5	level for program information, but not allow it to
6	give value to the homeowner, you know, for
7	anything other than a utility program.
8	So, anyway, so that's what we have to
9	say for building performance contractors with
10	these regulations. That's our main point.
11	PRESIDING MEMBER ROSENFELD: I'm sorry
12	that I don't think I understood your last point.
13	It was a question say it again.
14	MR. NESBITT: My last point is that
15	allow the building performance contractor to
16	provide an audit which does not include the HERS
17	index. And allow the HERS index to only exist at
18	PG&E and SMUD, at a program level for their
19	benefit. But not allow that index to be provided
20	as a HERS rater would provide it to a customer for
21	an energy efficient mortgage, or other type thing.
22	So that
23	PRESIDING MEMBER ROSENFELD: I'm sorry,
24	this is the rating performed by a contractor?
25	MR. NESBITT: Yeah, because the way the

```
1 regs are written the building performance
```

- 2 contractor can perform the index on jobs that they
- 3 do the improvement work on.
- So, that's what we have to say about --
- 5 that's all CalHERS has to say at the moment. I
- 6 can either fill out another card and make my
- 7 personal comments, or I can stay up here and say a
- 8 few more.
- 9 PRESIDING MEMBER ROSENFELD: Well,
- 10 first, you've raised three points already. And I
- guess I should ask the staff if they want to
- 12 respond.
- MR. PENNINGTON: Well, pardon me.
- 14 PRESIDING MEMBER ROSENFELD: Here's Bill
- 15 Pennington.
- MR. PENNINGTON: The approach that we
- 17 proposed here recognizes that building performance
- 18 contractors add value with their engagement in a
- 19 whole project from beginning to end. And can add
- value in terms of communicating the
- 21 recommendations effectively to the consumer. And
- for dealing with issues that come up onsite with
- 23 the implementation of particular measures.
- 24 So, they add value from the vantage
- point of polishing the practicality of the

1 recommendations that would come out of a rating.

- 2 And following through to see that they're
- 3 implemented. That's on the plus side.

4 On the minus side there can be potential

5 conflicts of interest with the rater and the

6 contractor being the same entity. And so we

purposely added provisions into these proposed

8 regulations that would endeavor to mitigate the

conflicts of interest and provide substantially

10 more oversight to obligate the approval of

building performance contractors to be a separate

approval through the Energy Commission that would

get scrutiny at that point in time related to how

the program would be delivered. And, you know, is

all the oversight there that we anticipate.

And so we think we have walked a middle

17 ground between -- to accomplish the advantages

18 that this particular service provider can bring

19 with the potential concern related to conflicts.

20 And so we've tried to be explicit about

that in what we propose, and take on the issue of

the conflict directly, and try to propose ways to

23 mitigate it.

11

12

13

14

21

22

24 PRESIDING MEMBER ROSENFELD: And I quess

25 George Nesbitt is saying he's not convinced. But

```
1 there we go. Okay.
```

- 2 MR. NESBITT: HERS raters aren't, but --
- 3 PRESIDING MEMBER ROSENFELD: On behalf
- 4 of the HERS raters. Okay.
- 5 You wanted to make your own private
- 6 comments?
- 7 MR. NESBITT: Yeah. The rest of my
- 8 comments of my private Environmental Design Build.
- 9 I'd like to thank staff and the Commission for
- 10 making some of the changes since the last
- 11 workshop. I think there have been some positive
- 12 changes in the right direction.
- 13 And I'd also like to say I've actually
- 14 been to all the workshops and I've read everyone's
- 15 comments. And I've generally been very impressed
- 16 with everyone's comments and their ideas. And
- there's a wealth of good ideas that could and
- should still be implemented.
- 19 On the down side I think removing the
- 20 post-retrofit bill analysis is not a good thing.
- 21 Although I do agree with the CBPCA that I think
- 22 providing that information back to the customer is
- 23 not necessarily the best thing. But I think from
- 24 a standpoint of collecting data, verifying
- 25 prediction methods, the modeling, it's a very

1 valuable tool. And it should be done by us raters

- 2 also when we are aware, or the utility is, when we
- 3 are aware that retrofits actually have happened.
- 4 And -- well, I submitted 14 pages of
- 5 comments from the last meeting. And I'm sure I
- 6 will submit more written comments, so I'll leave
- 7 it at that for now. Thank you.
- 8 PRESIDING MEMBER ROSENFELD: I'm being
- 9 slow, I guess I'm going to actually ask this. You
- say -- come back, if you don't mind, George.
- 11 Sorry.
- MR. NESBITT: That's okay.
- 13 PRESIDING MEMBER ROSENFELD: I've been
- 14 thinking about this mainly as the initial auditor
- 15 rating. Do I understand that if an audit is made,
- 16 that there is a post -- there's a second post-
- 17 retrofit inspection every time? Bruce?
- 18 MR. MAEDA: We removed the requirement
- 19 for building performance contractors to have a
- 20 post-retrofit bill analysis, but there still is an
- 21 option that that can be offered.
- There's a lot of complications with
- 23 being able to enforce the followup in any event,
- 24 but it is still there as an option and we could
- 25 still -- it could be required, for example,

1 utility programs and we can still gather the data

- 2 somehow. But we have to set that up.
- 3 PRESIDING MEMBER ROSENFELD: So now it's
- 4 optional?
- 5 MR. MAEDA: There's no longer a
- 6 requirement for performance contractors.
- 7 PRESIDING MEMBER ROSENFELD: And you,
- 8 George Nesbitt, is saying you think it should be
- 9 required?
- 10 MR. NESBITT: Yeah, I think it's
- 11 valuable. I mean as someone who has been doing
- 12 HERS ratings for seven years, I have consistently
- found that the modeling typically over-predicts
- 14 energy use, especially on smaller homes in the Bay
- 15 Area.
- And so all the predicted savings are all
- 17 -- it's all fantasy. So I actually got
- 18 frustrated, you know, seven years ago and quit
- doing it. And had gone back to utility bills and
- 20 developed a spreadsheet five years ago. Actually
- 21 since the last meeting I finally got it right. I
- 22 can finally calculate things on tiers, the actual
- value of an improvement and its effect on tiers.
- It's complicated.
- 25 And when I have utility bills I can base

```
1 all my saving predictions on the reality of what
```

- 2 their current consumption is. And so I think it's
- 3 very valuable, a) that when we have utility
- 4 billing data upfront, that we use that to make the
- 5 predictions. And then make the post-retrofit.
- 6 We need to tune the model upfront, as
- 7 well as the prediction. And I don't think we've
- 8 done that work very well. And it's the persistent
- 9 problem with HERS ratings, is that it's
- 10 theoretical and not actual-based.
- So, I will actually probably submit pds
- of my spreadsheets. Hell, I could submit the
- spreadsheets because quite frankly I could use
- 14 someone to figure out some of the formulas for me.
- 15 (Laughter.)
- MR. NESBITT: But it's just -- I think
- it's a disservice to the customer if we predict
- 18 savings that on energy and cost they're not
- incurring.
- 20 And I find it hard when I don't have the
- 21 utility bill data because it's just a total guess.
- 22 And I know it's a wrong guess. And so in a way
- then I want to shy away from any savings
- 24 predictions other than maybe saying you're going
- 25 to improve your house by X percent, you know. Or

1 you're going to reduce your heat load, you know.

2 But trying to predict what they're

3 actually going to pay and then what they're going

4 to save is scary. So.

5 PRESIDING MEMBER ROSENFELD: Is there --

6 I'm asking the three of you, is there any

mechanism for incentives for the followup audit?

I mean do the utilities give any incentives for

this relatively valuable sounding information,

10 sounds to me?

8

15

MR. PENNINGTON: Well, that's quite

possible. Of course, these regulations don't

address what the utilities do in their incentive

programs, you know. They're trying to set up a

structure of how to carry things out.

I mean in order to do the post-retrofit 16 17 analysis, you have some distance between the time 18 that a HERS rater is engaged to do a rating and the consumer using that information, making 19 20 decisions about what they want to invest in, 21 obtaining financing, getting the work done. And then a time period for which -- a year for which 22 the utility bills would accrue so that you could 23 24 do a post-retrofit analysis and evaluate the effect on energy bills against what the rating 25

- 1 produced.
- 2 And, in general, the rater is not
- 3 engaged with the consumer over that long period.
- 4 And so it's fairly impractical to expect that that
- 5 would happen a hundred percent of the time. Or to
- 6 require it.
- 7 It's, you know, there's a provision for
- 8 it. The idea's laid out in these regulations as
- 9 an option. It's something that potentially we
- 10 could encourage the utilities to promote through
- 11 incentives.
- 12 It requires a very long connection
- between the rater and the consumer to actually get
- 14 it done.
- 15 MR. NESBITT: Ideally we, as independent
- 16 raters, if the work is done we come back and
- 17 verify it. I mean that's the ideal scenario is we
- 18 give that independent rating up front. They hire
- 19 contractors and we come back to help try to
- 20 protect them and make sure the work gets done
- 21 right.
- The code may kick in and require some
- items be verified. And in that case we hopefully
- 24 would have the connection.
- 25 But if I understand it right, the way

```
1 utilities get to claim savings now is purely off
```

- of like Title 24 calculations. Oh, your house is,
- 3 you know, 15 percent above code, and therefore we
- 4 saved X amount of energy.
- 5 You know, I don't know how much they
- 6 have to prove real savings versus calculated
- 7 savings, but I think it's important.
- 8 ASSOCIATE MEMBER PFANNENSTIEL: But, Mr.
- 9 Nesbitt, to Mr. Pennington's point about having a
- 10 year's worth of utility bills to go back and do
- 11 that calculation, is that what you use? Or do you
- 12 use some subset of that? How do you do -- what
- does your spreadsheet require in terms of number
- of bills --
- MR. NESBITT: A year's worth of bills.
- ASSOCIATE MEMBER PFANNENSTIEL: So you
- do have a continuing --
- 18 MR. NESBITT: Yeah, two years is better,
- 19 you know. I mean, the nice thing if people have
- 20 online accounts with PG&E I can get two years of
- 21 data. But if I fill out a request form where the
- 22 customer authorizes me to get it, can only get
- one year.
- I don't see a big problem with it being
- 25 a year of post-retrofit. There may be a gap

```
1 between the audit and when the work happens, but,
```

- 2 you know, if the work happens, especially through
- 3 a utility program, I think then we, you know, or a
- 4 HERS rating, we have a mechanism for knowing work
- 5 is being done. And then being able to do the post
- 6 analysis.
- 7 I mean it could happen at the utility
- 8 level. It may be more practical than at the rater
- 9 level. But I think it's an important thing.
- 10 ASSOCIATE MEMBER PFANNENSTIEL: But you
- do this for every one of your customers?
- 12 MR. NESBITT: I haven't done so much the
- 13 post analysis at the moment. But I try to, when I
- 14 have utility bills I do it upfront. I mean I've
- been trying to go off of real bills. And it's
- 16 work.
- I can actually, with the exception of
- high-use customers, I can break down fairly
- 19 accurately where their energy use is going. The
- 20 high people, you know, lighting becomes this big,
- 21 you know, wild card, or they've got, you know,
- they're doing crazy things with pool pumps and
- 23 whatnot. And some of it you can quantify. It's a
- 24 little difficult.
- But, you know, it's -- you know, we've

1 got good data with the 2004 residential appliance

- 2 saturation survey. And, you know, we have some
- 3 good information to roughly go off of.
- 4 And with the bills, at least you're
- 5 going to be off less, you know. You know how big
- 6 the pie is. You may be off a little bit here and
- 7 there, but with a just, you know, standard rating,
- 8 you know, you can say the pie is twice as big as
- 9 it is. And so you're that much more off. So,
- 10 anyway.
- 11 PRESIDING MEMBER ROSENFELD: Okay.
- 12 Thank you very much. Bruce.
- MR. MAEDA: Bruce Maeda, Energy
- 14 Commission Staff. I want to point out that one of
- the reasons why we removed this provision for
- 16 performance contractors where the connection is
- 17 there for a little longer period of time is that
- 18 something Bob Knight mentioned, one of the
- 19 reasons, not the only one, was that the consumers
- 20 often will take back some of their -- a good
- 21 portion of their energy savings.
- 22 And so you confuse the issue as to
- 23 whether or not the retrofit worked or did not
- 24 work.
- 25 PRESIDING MEMBER ROSENFELD: Rashid.

1 MR. MIR: Rashid Mir, Energy Commission

- 2 Staff. The other thing is we removed the post-
- 3 retrofit, but at the time a rate of the utility
- 4 bill analysis is required. So, raters are
- 5 expected to collect the bills and enter the
- 6 information into the software, and do a utility
- 7 bill analysis, which would compare the simulation
- 8 to the bills.
- 9 And if the numbers are off because the
- 10 homeowner is using too much energy or too little
- energy, or there's something wrong with the
- 12 simulation, then that's a disclosure that the
- 13 rater is supposed to let the homeowner know that
- this analysis says there's something wrong here.
- 15 So we need to take the rater's recommendations
- 16 with a grain of salt. Or we need to go back and
- 17 look at it and do a custom approach and get
- 18 closer.
- 19 PRESIDING MEMBER ROSENFELD: Okay, I
- 20 will huddle with the staff. We can talk to the
- 21 utilities and see if there's any interest in an
- incentive for a post-retrofit. Okay.
- I don't think I can read the next
- handwriting. Mr. or Ms. Conlon? Mr.
- 25 (Laughter.)

```
MR. CONLON: Thank you. Conlon,
 1
         C-o-n-l-o-n, Tom Conlon with GeoPraxis and Energy
 2
         Checkup, a service of GeoPraxis. I put my card in
 3
 4
         there so that was why my handwriting was so
 5
         sketchy there. Sorry about that.
 6
                   My question was really to just explain
         what has changed in the rulemaking and the
         regulations since the August 14th hearing. And
 8
         understand why, what the rationale between those
10
         changes, what those changes might be. And then
11
         I'd kind of like to follow up on perhaps that.
                   PRESIDING MEMBER ROSENFELD: When do you
12
         want to do this?
13
14
                   MR. CONLON: I was hoping that I could
         -- the presentation did not really segment out
15
         what had changed from our last meeting. And so I
16
         saw some red type in the presentation and I wanted
17
18
         to understand if, for example, the cost effective
         methodology had been changed, as it appears to
19
         have been changed. And to understand the
20
21
         rationale behind why those changes were made.
22
                   PRESIDING MEMBER ROSENFELD: How do you
         want to handle this? Rashid did rush through the
23
```

MR. MIR: We changed the rating scale to

24

graphs, I --

```
1 250 from 150, and that was mostly so that the
```

- existing homes, when they show an improvement,
- 3 that they don't stay off the scale. That was one
- 4 of the main reasons based on comments from the
- 5 previous workshop.
- 6 On the slides, it starts at slide 27.
- 7 The standard approach cost effectiveness. Before
- 8 we were looking at all measures and doing rankings
- 9 of all measures. Now we're saying we want you to
- 10 group measures.
- So, for example, we want you to start
- 12 with building envelope measures. And evaluate
- those building envelope measures in that group.
- 14 Find the most cost effective within that group.
- That would be the first measure you would
- 16 implement. And then you go to the next measure
- and the next measure until you're done with
- 18 building envelope measures that are cost
- 19 effective.
- 20 Once you're done with that group, then
- 21 you would move to the next group.
- 22 MR. CONLON: And what was the rationale
- for making building envelope measures the first
- 24 measure to be analyzed? Was there some analytical
- 25 reason for that? Or was it an arbitrary decision?

1	MR. MIR: Based on comment from CBPCA
2	and SMUD. The emphasis was to reduce the load on
3	the house first, the external load and the
4	internal load. And then finally, once that load
5	and seal the building. And once that load is
6	finally lower, then you would actually replace
7	equipment down to a lower size, and hopefully get
8	some savings on equipment size reduction, as well.
9	And the appropriate, you know, load
10	requirement of that house, that is now hopefully
11	smaller than it was before.
12	MR. CONLON: All right. So it's from a
13	public policy perspective that we want to
14	differentially benefit load reduction measures
15	over other types of energy efficiency measures.
16	Because anybody that's familiar with simulation
17	methodology knows that when you that the order
18	of simulation measure analysis has a very
19	significant effect on cost effectiveness.
20	And NREL and others have done studies or
21	how significant that effect can be depending on
22	the interactive effects between measures.
23	And my understanding is that in most of
24	the studies the Commission does of individual
25	measure cost effectiveness, the classic approach

1 is to do a measure-by-measure individual analysis.

- 2 And to state what the benefit/cost ratio is for a
- 3 particular measure. And then move on to a second
- 4 individual measure.
- 5 And then to combine all those measures
- 6 together as a package. And then re-simulate to
- 7 understand what the interactive effects of all
- 8 cost effective measures would be.
- 9 If I understand the rolling basecase
- 10 group approach that's now proposed, it would give
- 11 significant benefit to the building envelope
- 12 measures ahead of the priority of some of the
- 13 other groups.
- 14 And I just want to be -- I think we
- should be explicit about that, if that's what
- we're doing here with our regulations.
- 17 PRESIDING MEMBER ROSENFELD: Yeah,
- 18 Rashid, I'm sorry, I was hunting for page numbers
- instead of slide numbers, so I missed the first
- 20 time.
- 21 I am sort of with Mr. Conlon. I mean
- I've never thought of measures except in sequence
- of the most cost effective one first. So, I'm
- 24 sorry, at the risk of being repetitious, how big a
- 25 change is this and why didn't we stick with the

```
1 traditional sequence?
```

- I'm sorry that I wasn't listening to you
- 3 the first time.
- 4 MR. PENNINGTON: Maybe I can help with
- 5 the response here. This was recommended by two
- 6 commenters as an improvement. What you often have
- 7 is you often have a defective envelope. And you
- 8 often have, particularly for older buildings, you
- 9 have a lack of insulation. You have --
- 10 PRESIDING MEMBER ROSENFELD: Or no
- insulation.
- MR. PENNINGTON: Or perhaps no
- 13 insulation. You have quite often a fairly leaky
- 14 envelope. And so you could focus on those
- 15 options.
- And the other thing is that the measures
- are more continuous. You know, changing levels of
- insulation as you're increasing them is a
- 19 relatively continuous thing. Whereas equipment
- 20 measures can be very lumpy, particularly if you're
- 21 not close to the end of the useful life of the
- furnace or air conditioner or whatever.
- So, basically this is looking at the
- 24 problem of trying to address the loads of the
- building, and focus in on the loads first. Try to

get the building envelope to be, you know, as --

- what's the word -- fundamentally in good shape as
- 3 it's cost effective. Try to get the ducts sealed
- 4 so that load that the HVAC system sees would be
- 5 prioritized.
- 6 And then turn to what are the equipment
- 7 changes that could be made. And that would be --
- 8 and at that point you have potentially a symbiotic
- 9 change there where you can reduce the size of the
- 10 equipment.
- If you are purchasing a new furnace, or
- 12 you are purchasing a new air conditioner, if you
- 13 reduce the loads first that that system is seeing,
- 14 then when you change you can not only consider an
- 15 efficiency upgrade, but also you can downsize the
- 16 equipment.
- 17 If you do it the other way around, you
- 18 tend to not be downsizing the equipment. So you
- 19 first choice tends to be a full-size unit that you
- 20 would be making the decision on.
- 21 PRESIDING MEMBER ROSENFELD: I would
- think, though, it is not the sort of traditional
- 23 approach, and I think -- well, maybe we should
- 24 talk about it offline.
- MR. CONLON: My sense is that one of the

1 beauties of this particular system is the standard

- versus custom approach. And my suggestion would
- 3 be to take a closer look at this, be sure we're
- 4 really clear about the rationale for making this
- 5 decision.
- And there's no reason why we can't give
- 7 some flexibility in the custom approach to do
- 8 measured groupings, lumpings, and to do some
- 9 packaging of savings packages for the contractors
- 10 who are actually implementing the work.
- 11 My vote would be in favor of keeping the
- 12 standard approach fairly standard and fairly
- 13 transparent with respect to traditional methods of
- 14 measure-by-measure cost effectiveness analysis.
- 15 Quickly on some other points. I wanted
- 16 to support the net zero energy goal scale. I
- 17 think that continues to be an important innovation
- 18 in the new program, and I like it. And I also
- support the increase to 250 as the maximum score.
- 20 I think it would be more meaningful to people to
- 21 see their home on the scale as opposed to just off
- to the left.
- I also want to support the concept of
- 24 removing post-retrofit bill analysis and making it
- 25 mandatory for the building performance contractor

```
1 retrofit option, at least at this stage of
```

- 2 regulation.
- 3 I think that there's plenty of mandates,
- 4 new mandates being imposed on the performance
- 5 contractor community. And we need to be sensitive
- 6 to how much regulation these new industries can
- 7 take.
- 8 Finally, I wanted to ask if any further
- 9 consideration has been given to just the issue I
- 10 brought up, I think, at the last hearing regarding
- 11 rating the whole house including significant loads
- 12 like pools and wells. If there has been any real
- 13 attention to trying to include the rating of those
- 14 measures or those loads in a standard home energy
- 15 rating.
- In other words, two houses of identical
- 17 construction and orientation. One's on a well,
- one's not. They would currently be given the same
- 19 rating score.
- 20 PRESIDING MEMBER ROSENFELD: I'm sorry,
- 21 I just didn't hear you. Two houses of identical
- 22 configuration, one's on a --
- MR. CONLON: One's on a well, the other
- one's on a city water supply.
- 25 PRESIDING MEMBER ROSENFELD: Oh, okay.

```
1 MR. CONLON: And their rating score, as
```

- 2 currently proposed, would be identical as I
- 3 understand it.
- 4 So the first question has to do with
- 5 those ancillary loads.
- And the second issue is has there been
- 7 any additional thought put into removing the
- 8 penalty against passive cooling where that is
- 9 homes that have no air conditioners.
- 10 In other words, again two identical
- 11 houses. One has an air conditioner, one without.
- 12 Currently they would both get the same HERS
- 13 rating, all other things being equal.
- 14 PRESIDING MEMBER ROSENFELD: Bruce.
- MR. MAEDA: There's a couple things
- 16 mentioned, I forgot one of them, but on the
- 17 passive cooling situation, I don't really believe
- there is a penalty for passive cooling. Even
- 19 though we require a system to be modeled, if a
- 20 building is truly a passive cooling building, it
- 21 will have truly a almost zero cooling load, except
- in a few very small or a very very small one.
- So, I don't think it's a penalty, but
- that's another issue.
- 25 PRESIDING MEMBER ROSENFELD: On this

```
1 business of the ancillary loads where they're not
```

- 2 completely visible, like the well pump which might
- 3 be a sort of hidden deficit, I can see the
- 4 argument for not rating it.
- 5 But it does seem like there should be a
- 6 listing, at least, of booby traps.
- 7 MR. PENNINGTON: That's exactly what we
- 8 propose. What you just said.
- 9 PRESIDING MEMBER ROSENFELD: So it would
- 10 be written down that there will be extra expense
- from the well pump or --
- MR. PENNINGTON: Right. Right.
- 13 PRESIDING MEMBER ROSENFELD: Is that
- 14 okay with you?
- 15 MR. CONLON: So, the score would be the
- same, the rating score would be the same, --
- 17 MR. PENNINGTON: Right.
- 18 MR. CONLON: -- but there would be on
- 19 the rating disclosure certificate some mandatory
- 20 reporting of like an estimated energy penalty for
- 21 the fact that there's a well? Or a pool? Or is
- that just a line in text someplace in the report,
- someplace else in the report?
- MR. MAEDA: The way it's set up now is
- 25 there are required recommendations for ancillary

```
1 loads, but not necessarily an estimate of the
```

- 2 penalty. We --
- 3 PRESIDING MEMBER ROSENFELD: Did you say
- 4 required recommendations? Did I hear you --
- 5 MR. MAEDA: There's some canned
- 6 recommendations that -- you got the swimming pool,
- for example, we recommend that you have a pool
- 8 cover if it's heated. We recommend that you use
- 9 efficient pumping systems, measures for improving
- your pumping performance on the pool and things of
- 11 that nature.
- 12 There are some standard recommendations
- that are required to be produced if the check the
- 14 pool as existing. We don't have an estimate of
- the energy consumption. We could put ones from
- 16 RASS in. We don't have that required at the
- moment.
- 18 MR. CONLON: Perhaps at this stage it's
- not -- I don't want to over-burden the process or
- 20 slow it down too much with this issue. But I do
- 21 think it's important on the main certificate to do
- 22 some kind of a disclosure there that the house has
- 23 a well, the house has a pool, the rating does not
- 24 reflect that.
- 25 And that's what we've done on our

```
1 report. And we continue to get feedback from
```

- 2 customers that that is a weakness in the HERS
- 3 rating process. That we should do a better job of
- 4 making sure that that's part of the energy profile
- 5 of these two different properties may be compared.
- 6 Oh, and the air conditioning cooling
- 7 penalty might be handled the same way, simply by
- 8 saying the home does not have an air conditioner.
- 9 It's been modeled as if it did. Something like
- 10 that could be added perhaps as key footnotes on
- 11 the certificate that would get that. Until we can
- 12 have better methodologies for doing this
- estimation, perhaps we could just note them on the
- 14 certificate.
- 15 Thank you very much for the
- 16 consideration of my comments.
- 17 PRESIDING MEMBER ROSENFELD: Thank you.
- 18 MR. MIR: There's the certificate, and
- 19 then there's the backup to the recommendation, the
- 20 rating report and part of the rating report
- 21 already are inputs. So some of this would show up
- on that inputs, but probably couldn't all fit on
- the certificate.
- MR. CONLON: All right.
- 25 PRESIDING MEMBER ROSENFELD: Bob Scott,

```
1 Executive Director of CHEERS.
```

- MR. SCOTT: Thank you, Commissioners. I

 can appreciate the hard work that the staff has

 gone through in preparing this, getting us to this

 point from, you know, a long time ago when we
- 6 started on this.
- I want to comment on three things that I
 think are pretty important, because over the past
 months and weeks we've been participating in
 discussions with staff, other stakeholders,
 software vendors about implementing things that
 HERS providers are going to have to implement
 beginning with 2008 standards.
- And obviously this regulation is
 important to that process because this is what we
 will be authorized under law to be performing as
 duties.
- I have three things that I want to bring

 up. The first one is related to building

 performance contractors. And I know that this

 issue has been discussed somewhat.
- But I think if we look at the regulation
 and in the technical manual most of the emphasis
 about building performance contractors is really
 focused on their responsibility and role as a

1 rater. And so I think it would be really helpful,

- especially to a provider who would consider having
- a building performance contractor program, some
- 4 continued guidance to deal with the little "c"
- 5 word that's in that definition in the regulation,
- 6 which is small contractor. And so the issue
- 7 related to licensing, I think, is very important.
- 8 One of the items that it suggests is it
- 9 allows them to be exempt from the independent
- 10 entities requirement in the regulation. And in
- 11 the HERS technical manual it says that if it
- 12 allows them to do work if they are general or
- 13 specialty contractors.
- I think right there you can see a
- 15 conflict if building performance contractors are
- supposed to be doing a whole-house approach to
- this, then shouldn't we require, and as a HERS
- 18 provider, I would like guidance to know that
- 19 perhaps this means that building performance
- 20 contractors are actually B or general building
- 21 contractors.
- 22 So I think it's an issue. There's more
- description of the role of building performance
- 24 contractors as raters versus how we look upon them
- as contractors. So that's one thing I'd like to

```
1 bring up on that.
```

- In regard to that, the training that

 building performance contractors have is supposed

 to be an extension or more in-depth training than

 that which we require for energy raters.
- And I guess I would wonder if we
 provided the same level of training to someone who
 becomes a California whole house home energy
 rater, what would be the difference between that
 training and what the building performance
 contractor does. So that's just sort of a
 quandary that I struggle with. We don't want to

dumb down our rater training obviously.

- The other thing that I think that it

 might provide is we do give guidance and look at

 what licensing requirements are, and be specific

 about it, is that I think it opens the opportunity

 for sharing with CSLB, with enforcement agencies,

 in trying to deal with this real problem of

 enforcement --
- 21 PRESIDING MEMBER ROSENFELD: I'm sorry,
- 22 what was the --

- MR. SCOTT: Oh, California State -- the
- 24 contractors license board.
- 25 PRESIDING MEMBER ROSENFELD: CSLB.

1 MR. SCOTT: CSLB, pardon me. And I'm

- just saying that it probably helps open that
- 3 dialogue because we do know that enforcement
- 4 certainly is an issue.
- 5 The third part is that -- or another
- 6 element to this is that special programs are
- 7 certified through this. Building performance
- 8 contractors and I think a higher level of defining
- 9 what the contractor's side of this is is
- 10 important.
- We have another special program that is
- 12 also authorized through this regulation which is
- third-party quality control programs. And I think
- 14 we have seen that there's been a need to increase
- the scrutiny, increase the definition of these
- programs.
- 17 And I would hope that we would really
- 18 look at releasing another special program; make
- 19 sure that there are controls; and that we really
- 20 understand how they're constructed and how they're
- 21 supposed to operate. Because, again, as a HERS
- 22 provider, we're supposed to -- we would be
- 23 expected to put together a program that would
- operate these types of programs.
- 25 I'll move on to another issue which has

```
1 to do with the HERS software.
```

- 2 PRESIDING MEMBER ROSENFELD: Hold on,
- 3 you're --
- 4 MR. SCOTT: Oh, I'm sorry.
- 5 PRESIDING MEMBER ROSENFELD: -- going
- 6 pretty fast --
- 7 MR. SCOTT: Want me to stop on that one?
- 8 PRESIDING MEMBER ROSENFELD: -- and I
- 9 wonder if the staff -- you already got four
- 10 bullets here, so I --
- MR. SCOTT: Oh, sorry.
- 12 PRESIDING MEMBER ROSENFELD: -- wonder
- if the staff wants to --
- 14 MR. MIR: Just on contractors, I mean
- there's existing law on contractors. So, we
- 16 didn't talk about, you know, -- and this is
- 17 probably an assumption, you know, they've got to
- have a driving license, they've got to have
- 19 contractors license if they're doing work on the
- 20 house, they've got to have, you know, all the
- 21 things that a contractor should have now. But we
- 22 didn't specify all that out.
- 23 Hopefully, I mean -- hopefully, an
- 24 unlicensed contractor, an unlicensed person would
- not be able to become a building performance

```
1 contractor because they --
```

- 2 MR. SCOTT: Hopefully.
- 3 MR. MIR: Hopefully. I mean, you
- 4 know, --
- 5 MR. SCOTT: And I guess that's the
- 6 problem I see.
- 7 MR. MIR: -- I mean it's -- I guess it's
- 8 implied that --
- 9 MR. SCOTT: Right. However, but if you
- 10 consider that in --
- 11 MR. MIR: I mean there are entities that
- 12 enforce that.
- 13 PRESIDING MEMBER ROSENFELD: I'm sorry,
- 14 Rashid, say that again?
- MR. MIR: There are entities that
- 16 enforce that.
- 17 PRESIDING MEMBER ROSENFELD: Oh,
- 18 okay, --
- MR. MIR: You know.
- 20 PRESIDING MEMBER ROSENFELD: Now usually
- 21 I would think if I hired a contractor and if his
- 22 business cards gives his contractor number I would
- assume he's --
- 24 MR. PENNINGTON: I think the key point
- 25 that Robert's making is beyond that. I think that

PETERS SHORTHAND REPORTING CORPORATION (916) 362-2345

```
1 he's saying that we shouldn't allow specialty
```

- 2 contractors to be a building performance
- 3 contractor. It should only be allowed for general
- 4 contractors, and the licensing category of general
- 5 contractors.
- 6 PRESIDING MEMBER ROSENFELD: Oh, okay, I
- think I wasn't listening hard. I'm sorry, can you
- 8 explain to me the difference between a specialty
- 9 contractor and a licensed general contractor? I'm
- 10 sorry, I didn't get it.
- MR. PENNINGTON: Well, a specialty
- 12 contractor is generally one trade. They're a
- mechanical contractor, or a --
- 14 PRESIDING MEMBER ROSENFELD: Or
- 15 electrical, or --
- MR. PENNINGTON: -- some, you know, a
- 17 plumbing contractor or whatever. Whereas a
- 18 general contractor is authorized to supervise the
- 19 work of other contractors. A builder is an
- 20 example of a general contractor. There are also
- 21 general contractors that work in the remodeling
- industry to supervise the work of other
- 23 contractors.
- So Robert's suggesting that perhaps
- 25 these regulations disallow specialty contractors

```
1 from being considered a building performance
```

- 2 contractor.
- 3 PRESIDING MEMBER ROSENFELD: Oh, okay,
- 4 thanks for straightening me out. Now, do you have
- 5 a response to that? Now that I understand the
- 6 issue.
- 7 MR. PENNINGTON: Well, I think that
- 8 potentially limits the field dramatically. And
- 9 potentially disallows some competent specialty
- 10 contractors from performing this work.
- 11 ASSOCIATE MEMBER PFANNENSTIEL: I'm
- 12 sorry, the regs do not --
- 13 MR. PENNINGTON: The regs do not mention
- 14 this now.
- 15 ASSOCIATE MEMBER PFANNENSTIEL: Okay.
- 16 So they don't narrow it down.
- 17 MR. PENNINGTON: But Robert's suggestion
- 18 potentially substantially reduces the field.
- 19 MR. SCOTT: I think that it's important
- 20 to try and identify something so there is guidance
- 21 to know what little "c" contractor means in that
- definition. And that's my only point.
- 23 And I say that if you go and look at
- 24 this exception that you have written in the
- 25 technical manual, it does say right there on page

```
1 62 about how the contractor serves as either a
```

- 2 general contractor or specialty contractor.
- 3 And there may be conflict in that very
- 4 statement if you have a specialty contractor that
- is supposed to be doing a whole house approach.
- 6 MR. HUNGERFORD: Is your concern that a
- 7 specialty contractor would not really have the
- 8 ability to do a whole house approach in his
- 9 rating? Or that there would be some sort of bias
- 10 introduced where an HVAC contractor would
- 11 recommend an HVAC solution and an insulation
- 12 contractor would recommend an insulation solution,
- and that sort of thing?
- 14 MR. SCOTT: No, no, I'm concerned with,
- as a provider, training these people and
- 16 certifying them to do work under this regulation
- 17 if they do not have the proper licensing that they
- 18 can -- and they are a rater, I just want to have
- 19 someone tell me, let me know what are the
- 20 authorized, what are the appropriate
- 21 certifications or classifications for that
- 22 individual.
- So we have guidance -- well, I sent them
- 24 out there to do this. Or we authorize them to be
- 25 out there to do this.

```
I'm just saying, to me it seems to need
some clarity to that, because I don't think that
C-20s can necessarily subcontract for insulation
or other kinds of measures.
```

5 MR. HUNGERFORD: So it's -- you're 6 concerned about potential competence issues rather 7 than bias issues?

8 MR. SCOTT: I'm concerned about
9 competence and liability issues potentially to us,
10 having certified not a general licensed contractor
11 doing whole house under a specialty license that,
12 by rights, they can't be doing.

13

14

15

16

17

18

19

20

21

22

23

And I'm just saying that there seems to be a conflict in how this states that as being allowed here.

MR. HUNGERFORD: I guess I'm confused.

Because if a performance contractor is only

licensed as an insulation contractor, and he

does -- he's certified, he knows how to do the

ratings, and he does that. That you're concerned

that he would -- that the customer might be

confused and allow that contractor to go ahead and

do an HVAC upgrade, as well?

MR. SCOTT: Well, I think that --

25 MR. HUNGERFORD: Only not do it properly

```
because he's not licensed as an HVAC
```

- 2 subcontractor?
- MR. SCOTT: No, he'd be a general, he
- 4 could subcontract to a specialty license.
- 5 MR. HUNGERFORD: If he's a -- your
- 6 concern is about the contractor, the narrow
- 7 contractors rather than the general contractor,
- 8 right?
- 9 PRESIDING MEMBER ROSENFELD: Yeah.
- 10 MR. SCOTT: Correct.
- 11 MR. PENNINGTON: So Robert's also
- 12 wondering if there's some licensing restriction
- 13 against specialty contractors performing the
- duties that you would expect a HERS rater to do,
- or a building performance contractor to do.
- And that's something we could
- 17 investigate. I hadn't heard that there was that
- 18 restriction, but we could investigate that.
- 19 PRESIDING MEMBER ROSENFELD: One would
- 20 sort of think that in principle even a specialty
- 21 contractor could be sufficiently trained to do
- HERS ratings.
- MR. PENNINGTON: One would think.
- 24 PRESIDING MEMBER ROSENFELD: Bruce.
- 25 MR. MAEDA: I would suspect -- Bruce

```
1 Maeda, Energy Commission Staff -- I would suspect
```

- 2 that even though they may have a specialty
- 3 contract and they're acting as a performance
- 4 contractor, they would essentially do it using the
- 5 homeowner as a general contractor, which the
- 6 homeowner is always allowed to do. So, --
- 7 PRESIDING MEMBER ROSENFELD: I'm sorry,
- 8 your voice faded. Just say the last --
- 9 MR. MAEDA: The homeowner can actually
- 10 act and hire subcontractors, and under the
- 11 recommendation of the specialty contractor who
- might be acting as a building performance
- 13 contractor. It's not the same in commercial
- 14 buildings, but for residential buildings the
- 15 homeowner can essentially take the place of -- or
- 16 take the responsibility for certain kinds of
- 17 activities.
- 18 MR. SCOTT: So, I guess so. Is there
- 19 some clarification to how that rule would be --
- 20 how you would tell homeowners you can be the
- 21 general contractor for this project?
- I just think there's some complications
- that I see here that I'm really not sure about.
- 24 And it certainly makes it clearer by specifying
- 25 the licensing requirement and classification.

```
1 MR. PENNINGTON: I think we understand
```

- 2 his comment.
- 3 PRESIDING MEMBER ROSENFELD: Oh, okay.
- 4 You know, I'm sorry, I cut you off because you had
- 5 already raised about five questions and you
- 6 weren't through.
- 7 MR. SCOTT: Sorry, I was -- my time's
- 8 up? Okay, I'll go.
- 9 (Laughter.)
- 10 MS. LAM: There is no time limit.
- MR. SCOTT: I do have two other ones,
- and I'll be -- these are fairly quick. And I
- think that they really can be handled fairly
- 14 easily.
- 15 One has to do with HERS software. In
- 16 the technical manual those details do suggest you
- 17 could have software developed independently from a
- 18 HERS provider's application. And I would just
- 19 like to see if there's some way to make that
- 20 specific in the regulation, as well, so that they
- are working in conjunction with each other.
- I already see that the requirement for
- having HERS software developed as it has to be in
- 24 ACM, implemented, developed, tested so it can be
- 25 released in the marketplace in a very short

timeframe. I think it's going to be certainly a
significant challenge.

And I think that if we create this opportunity within the regulation to split those out more specifically, then I think that would be a benefit. Point taken.

Okay. One final one here has to do with measure cost database. Again, drawing on the experience that we currently have ongoing with trying to respond to or being -- preparing to respond to the implementation of the Title 24 2008 standards, we've been discussing standardization of information so we're all kind of working from the same page.

And again, I would say that the measure cost database is really not very specific. We should be more specific. We should essentially try to develop some public domain standard so that we all are working off the same page, especially when it comes to measure costs, because measure cost is a fairly important attribute of cost effectiveness.

And I would recommend that the Energy

Commission should try to, you know, to coordinate

a collaborative among various stakeholder so we

```
1 could develop these standards. And therefore be
```

- working from the same page. And develop the cost
- 3 measure database that would be worthwhile for a
- 4 state -- would have some strength as a statewide
- 5 program, or a statewide tool.
- 6 PRESIDING MEMBER ROSENFELD: What is
- 7 there in the way of a database now? Bruce, are
- 8 you going to tell us? Or Bill?
- 9 MR. MAEDA: Bruce Maeda, Energy
- 10 Commission Staff. The way it was structured in
- 11 the regs and in the technical manual is the DERE
- 12 database would be the starting point. And we do
- 13 have a collaborative already written into the -- I
- don't know if it's in the technical manual or
- 15 the -- I think it's in the technical manual.
- We have a collaborative approach where
- 17 the Energy Commission would referee amongst the
- 18 providers to update that -- yeah, right, update
- 19 that database at least on an annual basis.
- 20 So the structure is there. The details
- 21 are --
- MR. SCOTT: Yeah. My point is that I
- think we ought to embark on this in fairly short
- 24 order.
- 25 PRESIDING MEMBER ROSENFELD: Okay. But

```
1 we seem to have agreement that collaboration is
```

- 2 necessary.
- 3 MR. MAEDA: Sure.
- 4 PRESIDING MEMBER ROSENFELD: That's it?
- 5 MR. SCOTT: That's all I have.
- 6 PRESIDING MEMBER ROSENFELD: Thank you
- 7 very much.
- 8 Mike Hodgson, you seem to be next.
- 9 MR. HODGSON: Thank you, Commissioners
- 10 and staff. Speaking on behalf of ConSol, but I
- 11 would like to put in a comment for CBIA, even
- 12 though I did not put in a card for Bob Raymer, who
- is attending another workshop, and wanted to
- 14 express his strong support and urge early
- 15 conclusion of the HERS rulemaking phase II.
- 16 Speaking for Consol, I have actually
- 17 similar comments in which very supportive of the
- 18 CEC in this HERS rulemaking. Would compliment
- 19 staff on their thorough analysis. And I would
- 20 also compliment staff on listening to us in May
- 21 and making some changes.
- The biggest change on the rating scale,
- I think, is a vast improvement. It's broadened.
- I have some questions about that and I still think
- 25 the variation between TDV and what the rest of the

world is using is significant. DOE is using site,

- RESNET is using, it's hard to describe but it's a
- 3 modified something load. And I won't go there.
- 4 But I think that's an ongoing
- 5 conversation. And the more uniformity we could
- 6 have the better this process would work in the
- 7 state.
- 8 But it begs some questions that I would
- 9 like, I think, mostly clarification on. The first
- is in looking at Rashid's slides, number 22, you
- 11 were looking at how utility costs are calculated.
- 12 And then kind of aggregating costs for not only
- the building, but also other features.
- 14 And I was just curious on that
- aggregation is whether you're using totally TDV
- 16 work or TDV and site, or how do you aggregate
- those costs?
- 18 MR. MIR: On slide 22?
- MR. HODGSON: I believe it was on 22.
- You're talking, for example, heating, cooling,
- 21 water heating, we understand how Title 24 works.
- Then you're going out to using a lighting model
- that's referenced in the manual, and it says use
- 24 XYZ.
- 25 Is that also on TDV or is that on site?

```
1 MR. MIR: This slide is from the RASS
```

- 2 report. The energy use would be based on TDV.
- 3 MR. HODGSON: Okay.
- 4 MR. MIR: For lighting appliances,
- 5 heating, cooling and water heating.
- 6 MR. PENNINGTON: For the rating.
- 7 MR. HODGSON: For the rating.
- 8 MR. MIR: For the rating.
- 9 PRESIDING MEMBER ROSENFELD: So
- 10 there's --
- 11 MR. PENNINGTON: And the information
- 12 about the kilowatt hours and therms would be
- 13 provided, as well.
- MR. HODGSON: And that would be on site?
- MR. PENNINGTON: And that would be --
- MR. HODGSON: Excuse me, on --
- 17 MR. PENNINGTON: -- site energy.
- 18 MR. HODGSON: -- site or source. Okay.
- 19 Good. So you're going to get both, the rating on
- 20 TDV and then actual predicted use that would
- 21 optimistically match the utility bill.
- MR. PENNINGTON: Correct.
- MR. HODGSON: Okay.
- 24 PRESIDING MEMBER ROSENFELD: Mike, I'm a
- little puzzled here. The pie weighted by TDV.

1 MR. MIR: The pie is electricity from a

- 2 sample report from RASS.
- 3 PRESIDING MEMBER ROSENFELD: In kilowatt
- 4 hours.
- 5 MR. MIR: In kilowatt hours.
- 6 PRESIDING MEMBER ROSENFELD: See, I'm
- 7 puzzled. There are three units that I can
- 8 visualize. One is kilowatt hours, --
- 9 MR. HODGSON: Right.
- 10 PRESIDING MEMBER ROSENFELD: -- I know
- 11 what that is on the meter, and I know what therms
- 12 is.
- MR. HODGSON: Um-hum.
- 14 PRESIDING MEMBER ROSENFELD: And then I
- 15 know what TDV is. I don't know, you're using the
- 16 word site, does that just mean kilowatt hours to
- 17 you?
- 18 MR. HODGSON: Source means kilowatt
- 19 hours to me, or site, either one, depending upon
- 20 how you're translating it. But, yes, that would
- 21 be kilowatt hours. And TDV is not --
- 22 PRESIDING MEMBER ROSENFELD: If you
- 23 could just make your remark in kilowatt hours I
- 24 wouldn't be so --
- MR. HODGSON: Okay.

1	PRESIDING	MEMBER	ROSENFELD:	

- 2 confused.
- 3 MR. HODGSON: My question, Commissioner,
- 4 was they have a series of aggregations of loads or
- 5 energy uses, I should say. Some of them, by Title
- 6 24, are currently calculated by TDV.
- 7 PRESIDING MEMBER ROSENFELD: Right.
- 8 MR. HODGSON: This slide is implying --
- 9 not implying, stating that we're going to go out
- 10 and get other appliances loads and have into the
- 11 rating, which is a great idea.
- 12 PRESIDING MEMBER ROSENFELD: Like
- 13 lighting.
- 14 MR. HODGSON: I'm wondering how do those
- marry. Are some of them TDVs and some of them
- 16 kWh? And I think the response is the rating,
- 17 which I'm not sure how you translate plug load in
- 18 TDV terms, so that means you assume an hourly time
- of use for that plug load --
- 20 PRESIDING MEMBER ROSENFELD: It's in the
- 21 schedule.
- MR. HODGSON: -- there is a schedule.
- Then that would translate the rating in TDV. But
- 24 the consumer, trying to figure out what my energy
- 25 bill is that I pay to --

1 PRESIDING MEMBER ROSENFELD: Needs

- 2 kilowatt hours and therms.
- 3 MR. HODGSON: Correct. I'm just trying
- 4 to --
- 5 MR. MIR: The rated would be based on
- 6 TDV, the utility bill analysis would be kilowatt
- 7 hours, therms, and the recommendations would be
- 8 kilowatt hours therms in dollars.
- 9 MR. HODGSON: Great. And then --
- 10 PRESIDING MEMBER ROSENFELD: Okay, I
- 11 think we dodged that bullet then.
- MR. HODGSON: This is not a bullet, it's
- 13 a question. Information.
- 14 (Laughter.)
- MR. HODGSON: Bullets come later.
- 16 Then --
- 17 MR. HUNGERFORD: Up here questions are
- 18 bullets.
- MR. HODGSON: I'm sorry?
- 20 PRESIDING MEMBER ROSENFELD: Forget that
- 21 bad joke.
- 22 (Laughter.)
- MR. HODGSON: The greenhouse gas
- 24 emissions that are actually quoted, and I'm not
- sure where they show up on the certificate,

PETERS SHORTHAND REPORTING CORPORATION (916) 362-2345

```
because my glasses don't read that small, or I
```

- 2 don't see that well, but is that also on TDV or is
- 3 that on kWh and therms?
- 4 MR. MIR: In the 2008 there's a, I
- 5 believe it's -- is it E-squared or E-cubed?
- 6 PRESIDING MEMBER ROSENFELD: Can't hear
- 7 you.
- 8 MR. PENNINGTON: E3.
- 9 MR. MIR: E3. They have a stream for
- 10 kWh, the amount of carbon emissions that would be
- 11 for each hour of the year. So, based on the
- schedule, and that's posted on the Title 24
- 13 website, as --
- MR. HODGSON: Okay, so you're --
- MR. MIR: -- as one of --
- MR. HODGSON: -- using 2008 Title 24
- 17 predictions for greenhouse gas.
- 18 MR. MIR: Numbers that would go into
- 19 that.
- MR. HODGSON: Great. Okay, thanks.
- 21 On the certificates, which were your
- 22 slide 11 and 14, the question I have is I think
- certificates are great, I like colors, I like
- 24 rating scales, good for consumer.
- 25 But are you anticipating that this is

PETERS SHORTHAND REPORTING CORPORATION (916) 362-2345

1 going to be kind of a format that we must use or

- 2 content that we use?
- 3 So if I want to produce a certificate,
- 4 do I have to use this style of certificate with
- 5 whatever is on there, or can I use the content on
- 6 there and put it in a different certificate?
- 7 MR. PENNINGTON: I don't remember
- 8 exactly what the HTM says on this. We're trying
- 9 to provide a consistent look across different
- 10 providers. But not lock in an absolute, you know,
- 11 must be these colors, you know, all of that.
- So, actually --
- MR. HODGSON: The reason I ask, Bill, is
- that some of us have gone to the trouble of
- getting our certificates actually approved in
- 16 energy efficient mortgage products through Fannie
- and Freddie underwriting guidelines and through
- 18 federally insured mortgage underwriting
- 19 guidelines.
- 20 If we now have to use a different
- 21 certificate we now have to go through that
- 22 approval process again. And now we may be
- requiring on a retrofit, rather than a new home,
- 24 two certificates, one of which is already approved
- and one that now someone has to have the

```
1 horsepower to get the underwriters to actually
```

- 2 acknowledge, the appraisal people to acknowledge.
- 3 And I'll tell you that is not a short process.
- 4 So if we can take content and put
- 5 content into a preapproved certificate we could
- 6 speed the application. If we have to use the
- 7 actual format, then I hope you're taking the
- 8 initiative to go contact those agencies that
- 9 actually may be using this certificate for lending
- 10 approvals, and telling us how you're doing that,
- 11 when you're doing that, and when we can use the
- 12 certificate.
- MR. PENNINGTON: So, relating to the
- latter, we were going to take you up on your offer
- 15 you made at the last public meeting to --
- MR. HODGSON: I don't recall any offer
- 17 at the last meeting.
- 18 (Laughter.)
- 19 MR. PENNINGTON: -- to assist in
- 20 discussing these recommendations with the lending
- 21 community.
- MR. HODGSON: That's fine, we'll be
- 23 happy to do that, Bill. My offer actually does
- 24 still stand. But the issue is the underwriting
- 25 guidelines right now, as we probably would

```
1 presume, are getting a little bit more difficult,
```

- and they're getting much more regulated than we've
- 3 had in the last 30-60 days, regardless of the last
- 4 six to 12 months.
- 5 And so approvals of this are getting
- 6 very very complicated. And that's why we think if
- 7 we can use content and not format we would have a
- 8 better chance of moving this forward in a quicker
- 9 path.
- 10 PRESIDING MEMBER ROSENFELD: Well, your
- scale, Mike, does have zero to 250?
- 12 MR. HODGSON: We don't have a scale,
- 13 Commissioner.
- 14 PRESIDING MEMBER ROSENFELD: You just
- don't have a scale?
- 16 MR. HODGSON: No. But what we would do
- 17 is, for example, we have a comfortwise certificate
- approved by Freddie and Fannie in underwriting
- 19 guidelines. That's currently in the new
- 20 construction market.
- 21 What we could use is something similar
- 22 to that certificate and add it into the existing
- 23 market and add a scale.
- 24 What the underwriter is interested in is
- 25 how did you generate energy savings? By what

```
1 predicting model did you use? They have their own
```

- 2 models, and you have to match up to their models.
- 3 And that's the question, is if you've
- 4 already documented how you match up to their
- 5 models, you're good to go. If you haven't, then
- 6 you have to go through their process, which is
- 7 about a couple-year process, assuming they're not
- busy. And right now they're a little preoccupied
- 9 to actually match their model.
- 10 So, my intent here is we want to move
- 11 this into the market as fast as we can, as
- 12 reasonably. And so either you're anticipating
- 13 that and we use your format and you have their
- 14 approval. Or we use a format that allows us to go
- with preexisting approvals on energy savings.
- 16 PRESIDING MEMBER ROSENFELD: And the
- 17 complication could be that we accept your offer,
- 18 use your format for a couple of years, and
- 19 meanwhile apply for some general format --
- MR. HODGSON: Well, I'm not sure what
- 21 the offer is, Commissioner, but the offer is to
- help you work with the underwriters, that's
- sincere and we'll be happy to do that.
- 24 PRESIDING MEMBER ROSENFELD: Yeah, I
- would say that's valued and necessary, yes.

1 MR. HODGSON: Right, but the implication 2 is if you already have a certificate in the market 3 that's accepted by the mortgage and underwriting 4 and appraisal industry, it's difficult right now

5 to change that.

19

20

You can change content, but basically where things are on the certificate, like what's the energy savings, what features are being installed, those are things that they have to record in other places in underwriting guidelines.

So, I would anticipate that we want to leave those things alone. Is there room for a scale? Absolutely. We could put a scale somewhere on the certificate. Is there room for some of the content there? Probably.

It's a very busy certificate already,
but we can make room. Does it have to be on 8.5by-11? Yes. So I mean there's some things that
we just have to squish into something that would
be appropriate.

21 And we'd be happy to work with you, but 22 this is a process that takes a long time to work 23 through.

24 PRESIDING MEMBER ROSENFELD: You're very 25 convincing and --

```
1 MR. PENNINGTON: So I found the pages in
```

- the HTM that talk about this, pages 9 through 11.
- 3 The expectation is that the RETI scale be used as
- 4 specified. And that there be a standard
- 5 California Energy Commission logo on it. And that
- 6 specific information be provided on the
- 7 certificate.
- 8 MR. HODGSON: Okay. So it sounds like
- 9 content and not format.
- MR. PENNINGTON: Right.
- MR. HODGSON: Okay, good. Thank you.
- 12 On slide 27, which was, I believe, a
- 13 previous speaker's comments, which is the rolling
- 14 basecase standard method -- this is an interesting
- 15 approach and I'm sorry I didn't catch this until I
- 16 came to the meeting today -- in which the analysis
- is done kind of sequentially for building
- 18 envelope, system design, et cetera.
- 19 Other speakers have noted how, you know,
- 20 this really is not traditional Title 24 cost
- 21 effectiveness approach. And I think we need a
- 22 little bit of time to understand what's the right
- way to go. I don't want to say what's right, but
- 24 what's the best approach on the HERS rating.
- But my impression is let's say that we

1 go with 1, 2, 3 and 4, as listed here. Or we even

- 2 do, you know, anything goes, whatever is most cost
- 3 effective.
- 4 The consumer still has a choice of
- 5 whatever they want to do. This is just a
- 6 suggestion, this is not a requirement. So I just
- 7 want to make sure that I understand that even
- 8 though this change has been made, it's just that
- 9 if you don't put in R-38 ceiling insulation you
- don't get to do the rest of the stuff that's
- 11 recommended.
- 12 And I don't think that's true. I think
- 13 the intent is whatever the consumer wants to do
- 14 and can be convinced to do, they do. This is just
- an unbiased approach theoretically to how we do
- 16 this.
- 17 PRESIDING MEMBER ROSENFELD: Sure, I
- 18 understand that. Although, just to repeat my
- 19 earlier hesitation, I'm not convinced yet that
- this slide 27 approach is the best one.
- 21 But surely, he who pays the piper calls
- the tune.
- MR. HODGSON: Okay. Last comment, and
- 24 it's really just kind of a caution to staff. And
- 25 that is we've been working on energy potential

1 savings in the retrofit market with Air Resources

- 2 Board and other state agencies in trying to
- 3 predict potential issues with greenhouse gas
- 4 reductions.
- 5 And one of the -- probably some of the
- 6 major studies out there that have been done by the
- 7 utilities have used the DERE database to predict
- 8 energy savings. And they get, in my opinion, some
- 9 odd results. And we've tried to dissect them.
- 10 And dissecting the DERE database is quite a
- 11 painful process.
- 12 And I'll just tell you that we have
- found in some instances, for example in
- 14 insulation, about 30 percent of the datapoints are
- missing. And when they're missing they go to
- 16 zero.
- 17 PRESIDING MEMBER ROSENFELD: Yeah, yeah.
- 18 MR. HODGSON: And if you're not paying
- 19 attention, then all of a sudden energy savings for
- 20 putting R-38 ceiling insulation in Riverside is
- 21 zero kWh.
- 22 And people haven't figured that out,
- which is really alarming. And so I think we have
- 24 a lot of work to do if we do use the DERE
- 25 database. Someone needs to pay attention to not

```
only cost, which is what we want to use it for,
```

- 2 but also energy savings if you want to use it
- 3 for -- and my preference would be to use Title 24
- 4 energy savings, but you know, we can talk about
- 5 that.
- 6 But it really is a arduous process to
- 7 dissect that database. And it's alarming to find
- 8 significant data missing.
- 9 MR. PENNINGTON: So just a comment. The
- 10 energy savings estimates come from the tool. And
- 11 how the tool calculates.
- 12 MR. HODGSON: Which is great. I'm
- 13 concerned that what we have found on the energy
- 14 side may be also true on the cost side. And we
- just have to be careful when using that data.
- MR. PENNINGTON: And that was the major
- 17 reason for us to say that the DERE database would
- 18 be a starting point for cost databases. And that
- it would get scrutinized and improved.
- MR. HODGSON: Thank you.
- 21 PRESIDING MEMBER ROSENFELD: Thank you,
- 22 Mike Hodgson.
- 23 Bruce Ceniceros. Good morning, welcome.
- MR. CENICEROS: Good morning,
- 25 Commissioner Rosenfeld, Commissioner Pfannenstiel.

```
1 PRESIDING MEMBER ROSENFELD: Can't hear
```

- 2 a word, Bruce.
- 3 MR. CENICEROS: Sorry, I'll talk more
- 4 into the mike here. First, Bruce Ceniceros
- 5 representing SMUD. And first off I'd like to
- 6 offer my compliments to the staff for coming a
- 7 long ways here in developing a very solid product
- 8 here.
- 9 You know, Bill, Helen, Bruce, Rashid,
- 10 everybody's put a lot of hard work on this, and it
- 11 really shows in the result we have right now. And
- 12 you did a great job of listening to, and
- incorporating, some excellent feedback from all
- 14 the stakeholders, who I also want to express my
- appreciation for, for sticking through this
- 16 process and giving a lot of attention.
- 17 The document we have today is -- the
- documents are much improved over what we started
- 19 with. And as we at SMUD are looking at
- 20 conceptualizing programs to support the home
- 21 energy rating system for existing homes, and doing
- 22 something at time of sale, we really are beginning
- to appreciate how solid of a foundation this will
- 24 provide to us to build those programs.
- 25 Since there have been a lot of questions

1 about the slide here, the rolling basecase and

- this progressive analysis by groups of measures, I
- 3 want to say just a little bit more. Although Bill
- 4 did a great job, I think, explaining the rationale
- 5 behind this.
- 6 Really, if you think intuitively this
- 7 makes a lot of sense. For the same reasons we
- 8 recommend that people, before they go and trade in
- 9 their car for a more efficient car, they take the
- 10 200 pounds of stuff out of the trunk and inflate
- 11 the tires properly.
- 12 You want to look at what's causing the
- 13 need to heat and cool your home first. And then
- 14 you look at how to do it most efficiently. And
- you go backwards from, you know, addressing the
- direct heating and cooling loads in the home, how
- 17 the heat moves into and out of the home. And then
- 18 the distribution system.
- 19 So you make sure it's done efficiently.
- 20 And then you look at well, how efficient -- well,
- 21 first of all, what size should the equipment be
- and how efficient should it be.
- 23 Tom Conlon was absolutely --
- 24 PRESIDING MEMBER ROSENFELD: Bruce, --
- MR. CENICEROS: Yes.

```
1 PRESIDING MEMBER ROSENFELD: -- I find
```

- 2 that unconvincing.
- 3 MR. CENICEROS: Well, I'll explain a
- 4 little more here with some examples.
- 5 PRESIDING MEMBER ROSENFELD: All right,
- 6 I'll listen.
- 7 MR. CENICEROS: Yes, so Tom Conlon was
- 8 absolutely right in that the order that you
- 9 analyze these things can completely change your
- 10 decisions in terms of what you would do if you
- 11 first determined that a certain measure A is cost
- 12 effective, and then you put that into your
- 13 basecase. That changes the equation for
- 14 everything you evaluate after that.
- So, for example here, if you -- I'll
- give you the example of my home. It was done as a
- 17 package. I had a home performance contractor come
- 18 out and recommend a package. It included a Freus.
- 19 They did not have the analytical tools to go
- 20 through and do this kind of incremental approach
- that we've described here.
- But, when I did that in my own
- 23 spreadsheet and started with the measures first
- that affected the envelope, and then said, okay,
- 25 here's the new energy use after you do this cost

effective measure. And it goes down by a certain percentage.

2.0

And then here's another incremental improvement in efficiency. That decreases the pool available of savings, because the energy use is now less after each of those measures.

By the time I did the efficiency of the air conditioner last, the Freus unit had a payback of 30 years. Okay. It didn't look that way on paper when you looked at the Freus by itself if you looked at that first. The payback was less than half that.

We got the cooling demand down in the house by 40 percent. Then look at the merits of increasing the efficiency of the air conditioner that much. And then the payback was 30 years.

I still did it because I'm an efficiency geek and I think electricity prices are going to go up a lot over the time I have that unit. But, I would not recommend it. I would not have recommended it to the average homeowner. They would have been better off going with a federal standard 13 SEER air conditioner, or maybe a 15 SEER, 12.5 EER air conditioner, saving several thousand dollars that could have been put instead

- 1 towards the insulation.
- 2 So, the other problem this creates, too,
- 3 is if you start with the equipment first, and that
- 4 is the traditional approach, that's why we have so
- 5 many homes that still have bigger heating and
- 6 cooling loads than they need to, because the
- 7 standard contractors that just look at the
- 8 equipment, they'll go and they'll put in an
- 9 efficient air conditioner when the homeowner says
- I want to be efficient. But you're just then very
- efficiently cooling the attic with the 20 percent
- 12 to 25 percent of duct leakage that they may still
- 13 have. Although hopefully they took a permit out
- 14 and they've sealed the ducts now. But we know
- that doesn't happen very often.
- And they're still cooling a home that
- maybe could have only 70 percent or 80 percent as
- 18 much heat gain because of improvements that have
- not have been made in fixing the thermal bypasses
- and topping off the insulation in the attic and
- 21 things like that.
- Once that decision has been made and the
- 23 equipment's changed out, then it decreases the
- 24 cost effectiveness of ever doing those envelope
- 25 measures later.

1	So, I think this is actually more
2	important for contractors who aren't home
3	performance contractors, because they generally do
4	follow this kind of approach logically in their
5	minds, but they don't do it in an analytical tool
6	in all cases.
7	When that C-20 contractor comes out
8	there and makes recommendations on the replacement
9	of the equipment and what efficiency it should be,
10	that the homeowner has been presented with a
11	package of measures that has been analyzed in this
12	sequential manner, so that they can see all the
13	cost effective building envelope measures, here
14	they are. And then the distribution system. And
15	then the equipment last.
16	So, it just makes intuitive sense that
17	you don't want to drive your car around with 200
18	pounds of stuff in the trunk if that's an easy
19	thing to fix.
20	PRESIDING MEMBER ROSENFELD: But, you're
21	just picking a nice example. Of course I don't

PRESIDING MEMBER ROSENFELD: But, you're just picking a nice example. Of course I don't want to drive my car around with 200 pounds worth of dead load in the trunk. But -
MR. PENNINGTON: There's another

argument that I would like to present to you. One

```
of the problems with older homes is that the
```

- building envelope is defective in terms of thermal
- 3 bypasses. And so you get very uneven comfort
- 4 within this building envelope.
- 5 And wherever the flaws show up in the
- 6 building envelope you get points of comfort
- 7 issues. The radiant temperatures vary
- 8 substantially that the walls are giving off.
- 9 And so you're getting losses from body
- 10 heat to the cold surfaces that if you didn't have
- 11 that, it would be much easier to condition the
- 12 building.
- 13 And what often happens with these
- defects and with these kind of out-of-control
- 15 radiant temperatures on the surfaces of the
- 16 envelope, the homeowner compensates by jacking up
- 17 the thermostat in the heating mode to overcome
- 18 that comfort problem.
- 19 And if you fix the building envelope's
- 20 comfort issues first, then maintaining comfort
- 21 throughout the house.
- 22 And another, you know, example of a
- problem is related to duct sealing. If you put in
- 24 the very high efficiency air conditioner/furnace
- and you haven't sealed the ducts first, you've

1 made a major mistake. And you're just wasting the

- benefit of that system.
- So, in the scheme --
- 4 PRESIDING MEMBER ROSENFELD: But, Bill,
- 5 let's take that as an example. I'm used to
- 6 dealing with a computer program where you can, if
- 7 the total of these things adds up to, you know, 20
- 8 items or something, you can look at the cost
- 9 effectiveness of each item first and find the --
- 10 the first one, and take the most cost effective
- 11 first.
- 12 You would discover then the duct sealing
- was very very cost effective and would come in
- 14 early in the game. I think your --
- 15 MR. PENNINGTON: Not necessarily. And
- 16 you don't pick up the --
- 17 PRESIDING MEMBER ROSENFELD: The non --
- 18 MR. PENNINGTON: -- the symbiotic --
- 19 PRESIDING MEMBER ROSENFELD: -- any
- benefits, that's a very good point.
- 21 MR. PENNINGTON: -- interactive effects.
- MR. CENICEROS: My understanding is that
- 23 the previous case was essentially allowing for a
- 24 random analysis of the measures. And whatever it
- 25 happened to hit first that was cost effective

1 would then go into the basecase, is that correct?

- 2 MR. PENNINGTON: What was most cost
- 3 effective.
- 4 MR. CENICEROS: Yeah, it was what was
- 5 most cost effective. So you'd analyze them all
- 6 first --
- 7 MR. PENNINGTON: Right.
- PRESIDING MEMBER ROSENFELD: Yeah.
- 9 MR. CENICEROS: -- and go through a
- 10 whole iteration. The most cost effective thing
- 11 would then go into the basecase, and then you'd
- 12 re-analyze the cost effectiveness of all the
- 13 remaining measures, and then put that into the
- 14 basecase, the most cost effective.
- 15 So, that sounds good from an engineer's
- 16 perspective -- I'm an engineer, I can say that --
- 17 but it does not accommodate all these issues in
- 18 terms of the hierarchy.
- 19 And really, since our goal is to
- 20 recommend all of the cost effective measures to
- 21 the homeowner, why do we care that we did the
- 22 analysis with the first one first, the most cost
- 23 effective first, when it may make more sense, and
- I believe very strongly it does make more sense,
- 25 to look at all the measures that are cost

1 effective, starting from the most to the least,

- within category one of building envelope before
- 3 you move on to the next category.
- 4 Because the other problem we have
- 5 throughout California is air conditioners and
- furnaces, both, are tremendously oversized, and
- 7 are the number one, probably one of the top
- 8 drivers of discomfort in homes and over-use of
- 9 energy.
- 10 And when an air conditioner doesn't
- 11 reach full efficiency on its performance curve,
- 12 until what 15, 20 minutes of operation, and
- they're cycling off after ten most of the time,
- then we're never getting the nominal efficiency
- 15 that we think we are anyway, if we're going to go
- and do that as measure one, you know, upgrade to a
- 17 15 SEER air conditioner.
- 18 It becomes a subordinate priority to all
- 19 these other things that will give your a much much
- 20 better result in the end. And you would get a
- 21 different package going with this approach than
- you would if you did it by order of most cost
- effective to least cost effective, as before.
- 24 MR. PENNINGTON: So reinforce one idea
- 25 here. This is proposed as the standard approach.

1 This is proposed to be done for each house. It's

- 2 provided as information. This is what you get if
- 3 you do the approach this way.
- 4 There's also an expectation that custom
- 5 approaches will be done where homeowners can
- 6 choose their measures that they wish, or whatever
- 7 the motivation is for looking at alternative
- 8 measures.
- 9 And there isn't any mandate on what the
- 10 homeowner ultimately chooses. So this is just
- 11 providing information consistently through this
- 12 approach.
- 13 PRESIDING MEMBER ROSENFELD: I quess we
- 14 should do this offline. I'm still -- I mean the
- 15 one thing you did get across to me is that there
- are not energy benefits, there's sitting next to a
- drafty single-glazed window is uncomfortable, I
- 18 accept that. And that isn't taken care of
- 19 properly by the computer programs.
- 20 Maybe you make two runs, maybe you do
- 21 the traditional approach of at least for the
- 22 custom-rating, maybe you do the traditional
- approach and show that to the homeowner. And you
- also do the envelope first approach.
- I realize that's work, extra, although I

```
don't know that -- the computer programs run
```

- 2 pretty fast. So, Bruce.
- 3 MR. MAEDA: I want to point out you're
- 4 probably making an awful lot of runs no matter
- 5 which way you do it. And you're doubling them if
- 6 you --
- 7 PRESIDING MEMBER ROSENFELD: Yeah, I
- 8 realize that. Well, we seem to have a hot issue
- 9 here. Okay, Bruce.
- MR. CENICEROS: So I'll just conclude by
- 11 reiterating SMUD's support for this particular
- 12 change, which I think is the most valuable change
- 13 we've made in the last six months as we've been
- 14 going through this proceeding. And will add a lot
- of value to this as a tool and recommendations to
- the homeowner that will give them the best result.
- But I did want to ask one question on
- 18 the scale, which I think you really got right at
- 19 this stage in the way it's presented. But, having
- 20 it terminate at 250 on the left end of the scale,
- 21 did you get a chance, or did you identify any data
- that gave you some sense of what percentage of
- homes would be above a 250?
- 24 MR. PENNINGTON: We don't know that with
- certainty. We've had an estimate using a research

```
1 version, I guess actually using the 2005 standards
```

- 2 tool is what we used.
- 3 And we saw a clumping of homes around
- 4 200. I think George Nesbitt reported something
- 5 similar. But we don't have the new tool, you
- 6 know. The new tool is coming. So there
- 7 undoubtedly will be homes that score worse than
- 8 250.
- 9 MR. CENICEROS: And as we've commented
- 10 before, we think it's good for the worst of the
- 11 worst to show off the scale so they can see, wow,
- they've got to at least get back on the scale.
- 13 And so that's a good message to send, as long as
- it's not like 25 percent or more of the homes,
- which it doesn't sound like it is here.
- And with regards to an earlier comment
- on this may be putting too many people in the
- 18 middle who still have arguably room for
- improvement, I'm surmising that the average score
- 20 for existing homes of all vintages would probably
- 21 be, you know, to the left of center on this.
- 22 Probably in the 150 range.
- 23 And therefore, they won't look like
- they're in the middle. Most homes will probably
- 25 look like they have room to go to the middle, and

```
1 then to the right.
```

- 2 So, anyway, good job on all this. Thank
- 3 you very much for all your hard work.
- 4 PRESIDING MEMBER ROSENFELD: Thank you,
- 5 Bruce. Mark Kamrath from SMACNA.
- 6 MR. KAMRATH: Thank you, Commissioners
- 7 and Staff. SMACNA, being the -- well, the union
- 8 group of air conditioning contractors, is who I
- 9 speak for. I'm also a contractor within that
- 10 group.
- 11 And I would like to thank you, as well,
- 12 for your work. We see this HERS as going to be a
- 13 great tool for our residential contractors that
- 14 are involved in responsible building.
- 15 And I think that's what everybody in the
- 16 room wants to see things go towards, is
- 17 responsible building. And this can certainly be
- 18 used for that.
- 19 I'm also pleased to follow Bruce,
- 20 wherever he went, and my brethren in the utility
- 21 world. We, as contractors, and our group on the
- 22 energy and environmental policy, we find ourselves
- in an enviable position of trying to steer down
- the river with one foot in each canoe, a couple
- 25 different canoes.

1 As long as those canoes are tracking

- 2 we're doing okay. When they start moving apart it
- 3 gets a little painful. We find ourselves
- 4 oftentimes having to even juggle three canoes.
- 5 And that makes it even more fun.
- 6 And these three would be your work, and
- 7 the work of the CPUC, as well as the work of the
- 8 utilities. And being involved with all of those,
- 9 we are seeing in a grand scheme a convergence,
- 10 which is promising.
- But what Bruce highlighted is what we're
- 12 also seeing, a different metric in considering
- 13 efficiency changes and efficiency upgrades in
- 14 efficiency approaches.
- 15 In you venue it's strictly residential.
- But we're seeing it across the board in
- 17 commercial, as well.
- 18 A different way of thinking. The
- 19 utilities now are in the middle of trying to get
- 20 their portfolios worked through the CPUC. One of
- 21 the things in that is going to turn into rebate,
- 22 which will turn into perhaps some financial
- impetus to what you guys are doing here.
- 24 What we're seeing from them is they want
- 25 to -- they've made statements that we don't want

1 to do widgets anymore. We don't want to give you

- 2 money for a thermostat, money for a whole house
- fan, or get a new outside air conditioning unit
- 4 that's more efficient. We'll give you money for
- 5 that. Without considering its effect on the whole
- 6 system of that house.
- 7 So, I, too, as a contractor would like
- 8 to kind of second the approach that these guys are
- 9 doing, third the approach that Bruce mentioned,
- 10 that there is a new way of thinking. And to the
- 11 extent that your Committee and your work sort of
- 12 aligns like that, it's going to help the industry,
- our industry, move forward in a more efficacious
- 14 way.
- That being said, I'd like to address my
- 16 second issue. And that would be this issue of
- building performance contractors. We would be
- 18 finding ourselves in the specialty contractor
- 19 range. We're HVAC contractors.
- 20 I would contend that there would be no
- 21 better contractor to give a performance building
- 22 title to in the air conditioning realm than a
- 23 well-trained air conditioning contractor.
- 24 Certainly that doesn't preclude the
- 25 general contractors from getting their

```
1 certification, as well, or their licensing, as
```

- 2 well. But if we limit it to that, we have the
- danger of them then going to maybe a noncompetent
- 4 contractor under their umbrella.
- 5 I would think that specialty contractors
- 6 that have the desire and the interest to be a
- 7 performance contractor or an energy performance
- 8 contractor, and went through the effort to get
- 9 that designation, that that would be the best of
- 10 both worlds. If you had that contractor,
- 11 subcontractor working with a general contractor,
- 12 then you could get the best performance of it all.
- 13 And also to mention that there's nothing
- to say to prevent that subcontractor, us, as a
- performance contractor, to act as a prime
- 16 contractor, bringing in specialty expertise on the
- insulation side or the electrical side, as is
- 18 needed. Who perhaps would be even their own
- 19 performance contractors, as well.
- 20 So I think there's great value to
- 21 allowing specialty contractors to still be
- considered as a performance contractor, as well.
- 23 So, thank you. Good job. Help keep my
- canoes together, if you would, and we'll move
- ahead together.

1 MR. PENNINGTON: Could I ask a question?

- 2 PRESIDING MEMBER ROSENFELD: Please,
- 3 Bill.
- 4 MR. KAMRATH: Oh, certainly.
- 5 MR. PENNINGTON: I'm wondering, Robert
- 6 was speculating that perhaps there might be some
- 7 restriction in licensing law to having a specialty
- 8 contractor perform the duties that are laid out
- 9 here for a building performance contractor.
- 10 Are you aware of any restrictions like
- 11 that? Or any --
- 12 MR. KAMRATH: I am not, but I haven't
- done the work to look, either. So, I can't answer
- 14 that.
- 15 I know, I can step over to the side and
- 16 be my own personal company. We are air
- 17 conditioning contractors, we are plumbers, we also
- 18 have a general contractors license. And so we
- 19 have taken means and methods around that to be
- able to allow ourselves to address licensing
- 21 issues like that.
- So, for us, personally, I don't think
- that would be an issue. But perhaps he's very
- 24 correct on that. I don't know.
- MR. PENNINGTON: Thank you.

1	PRESIDING MEMBER ROSENFELD: Mike
2	Bachand from CalCERTS. Good morning.
3	MR. BACHAND: Good morning. Good
4	approaching noon. Thank you, Commissioners and
5	Staff. I want to especially thank you for being
6	the referees between the providers, but I'm
7	haunted by a vision of Bill Pennington in a black-
8	and-white-striped shirt.
9	(Laughter.)
10	MR. BACHAND: I hope that vision doesn't
11	stay with me. I do have some other concerns
12	besides the referee thing.
13	Regarding, again, the contractor's
14	licensing that Robert Scott was talking about, I
15	want to find out if you've contemplated who
16	verifies that the contractor's license is active,
17	invalid, incorrect.
18	And I want to suggest that language be
19	put in the standards to address that, because we
20	do get clarifications from staff on things that
21	we're not sure of. And we appreciate those
22	clarifications. But they can be implemented in
23	spotty fashion possibly. They may or may not be

And so I would like to see something a

24

25

enforceable.

```
1 little bit more concrete in the standards that
```

- 2 says not only who does this verification, but what
- 3 are the ramifications if it's in place, and then
- 4 not in place. A little bit of something other
- 5 than guidance on that would be, I think, very
- 6 important. And I would appreciate something on
- 7 that.
- I echo the other comments that Robert
- 9 Scott made, and I appreciate those, with respect
- 10 to the contracting community.
- 11 And also, having been a general
- 12 contractor, myself, at times, and having been
- 13 acting as a builder's representative for
- 14 construction purposes, it is my understanding, and
- this needs due diligence, but it is my
- 16 understanding that a subcontractor classification
- 17 does not allow that contractor to be involved with
- 18 subbing to other general trades in a way that a B
- 19 contractor does. So I think that should be looked
- 20 at very carefully, because that's my understanding
- 21 of that situation.
- That's all I have to say. And thank you
- for your time.
- 24 PRESIDING MEMBER ROSENFELD: Thank you.
- Jon McHaffy -- McHugh, oh, gee, I'm sorry, I

1 didn't recognize you, Jon. Good morning; it's one

- 2 more minute before noon
- 3 (Laughter.)
- 4 MR. McHUGH: Always right before
- 5 lunchtime. Thank you very much.
- 6 Could we go to the slide that talks
- about the cost effectiveness rating? I wasn't
- 8 actually planning on talking, but since --
- 9 PRESIDING MEMBER ROSENFELD: The famous
- 10 slide 27.
- 11 MR. McHUGH: There we go. When you look
- 12 at the cost effectiveness of measures, as I
- 13 remember what we're doing for the benefit/cost
- 14 ratio is we look at the first year energy savings
- 15 divided by the annual mortgage payment for the
- 16 measure.
- 17 Now, and that's over 30 years. And what
- 18 probably creates a little bit of a problem in
- 19 terms of evaluating insulation versus equipment
- 20 versus lighting is that there is no measure cost
- 21 here. And so something that might have a measure
- 22 live of five years is now actually being -- its
- 23 cost is being divided over 30 years.
- So, either you might want --
- 25 PRESIDING MEMBER ROSENFELD: Wait, wait,

```
wait a minute. Don't understand.
```

- 2 MR. McHUGH: Okay, so --
- 3 PRESIDING MEMBER ROSENFELD: If it's the
- 4 HVAC --
- 5 MR. McHUGH: -- let's say it's HVAC and
- 6 it has --
- 7 PRESIDING MEMBER ROSENFELD: -- its cost
- 8 is annualized over 16 years or something --
- 9 MR. PENNINGTON: So, Jon misspoke. He
- said measure cost, and he meant measure life.
- 11 He's saying that the measure life can vary.
- 12 PRESIDING MEMBER ROSENFELD: Oh, it does
- vary, right.
- MR. PENNINGTON: Yeah, --
- 15 PRESIDING MEMBER ROSENFELD: And it
- 16 tends to be 50 years for -- or 30 years for
- insulation and maybe only half of that for HVAC.
- 18 MR. McHUGH: Okay, so if you look at
- 19 that second bullet in the area in red it says the
- 20 first year energy savings divided by the annual --
- 21 additional annual mortgage payment. And it
- doesn't have any discussion that the mortgage
- 23 payment is -- the mortgage payment over the life
- 24 of the --
- 25 PRESIDING MEMBER ROSENFELD: Wait, I'm

```
sorry, which --
 1
 2
                   MR. McHUGH: -- equipment --
                   PRESIDING MEMBER ROSENFELD: -- line are
 3
 4
         you reading?
 5
                   ASSOCIATE MEMBER PFANNENSTIEL: Bullet
 6
         two.
                   PRESIDING MEMBER ROSENFELD: Bullet two,
         evaluate all possible measures in the group and
 8
         write measures in terms of benefit-to-cost ratio.
         Parentheses, first year energy savings divided by
10
11
         additional annual mortgage payments.
                   Yes. And --
12
13
                   MR. McHUGH: Okay, so let's say I have a
14
         piece of equipment that lasts ten years, right?
                   PRESIDING MEMBER ROSENFELD: Okay.
15
                   MR. McHUGH: And that piece of
16
         equipment, its cost is being amortized over the 30
17
18
         years of your mortgage. So, either you need to
         have a additional discounted cost stream that
19
20
         shows at 20 years and at 30 years of these
21
         discounted costs, or you say, well, my mortgage
         payment is going to be over the life of the piece
22
23
         of equipment.
```

lifespans, you're actually, by accident, creating

But by taking things different effective

24

```
1 more value for things that have shorter lifespans.
```

- 2 PRESIDING MEMBER ROSENFELD: I'm
- 3 sorry, --
- 4 MR. McHUGH: Okay, so let's just --
- 5 PRESIDING MEMBER ROSENFELD: Let me say
- 6 what I've --
- 7 MR. McHUGH: -- assume we have a --
- 8 PRESIDING MEMBER ROSENFELD: -- always
- 9 understood. You have a ten-year lifespan piece of
- 10 HVAC equipment and you have a 30-year insulation
- 11 or even duct sealing.
- 12 And I thought each one of those was
- evaluated on its own lifetime.
- MR. McHUGH: Bill, can you clarify?
- MR. PENNINGTON: Well, at the last
- meeting we said probably doing present-value
- 17 calculations and explaining that to consumer is
- 18 beyond the pale. So, Jon's correct about doing
- 19 present-value analysis, you would want to account
- for the use of the life and be careful about that,
- 21 and do discounting.
- 22 And you might have multiple measures
- with different useful lives. And you would want
- 24 to account for all that.
- 25 PRESIDING MEMBER ROSENFELD: Yeah.

PETERS SHORTHAND REPORTING CORPORATION (916) 362-2345

```
1 MR. PENNINGTON: That's very complex to
```

- 2 present to a consumer. And the comment at the
- 3 last workshop is that that was probably beyond the
- 4 pale of what we would do.
- 5 So, this approach would not do a
- 6 consideration of the useful life. It would
- 7 basically be comparing the first cost against the
- 8 annual -- the first year annual mortgage
- 9 reduction. So it would be a first year cost
- 10 evaluation.
- 11 PRESIDING MEMBER ROSENFELD: Oh, boy, I
- 12 guess you're right.
- 13 MR. McHUGH: So that would actually give
- 14 some --
- MR. PENNINGTON: So we can complicate
- 16 this, if you want, yeah. Take out our pens here
- 17 and go crazy.
- 18 PRESIDING MEMBER ROSENFELD: Okay, thank
- 19 you for that enlightenment.
- 20 MR. CENICEROS: Would you like a
- 21 suggestion for a fix to that before his next
- 22 question?
- 23 PRESIDING MEMBER ROSENFELD: I'm sorry,
- 24 who's --
- MR. MAEDA: Bruce.

```
1 MR. McHUGH: Bruce.
```

- 2 MR. CENICEROS: I can give --
- 3 PRESIDING MEMBER ROSENFELD: Bruce, say
- 4 that louder or come up.
- 5 MR. SPEAKER: Come up to the mike,
- 6 Bruce.
- 7 ASSOCIATE MEMBER PFANNENSTIEL: You have
- 8 to come up to the mike.
- 9 PRESIDING MEMBER ROSENFELD: Sorry.
- 10 MR. SPEAKER: He blends with the
- 11 background.
- 12 (Laughter.)
- 13 MR. CENICEROS: Okay, so I think the
- 14 dilemma here is the way that would be best optimal
- 15 to calculate cost effectiveness from the
- 16 standpoint of, you know, comparing measures, is
- not what you'd want to present to the consumer.
- 18 So, if you think there may be an
- 19 approach where the calculations are done based on
- 20 the present value or lifecycle cost analysis, but
- 21 then the end result or even the measure-by-measure
- 22 numbers for cost effectiveness based on over the
- 30-year life of the mortgage would be what you
- 24 presented to the consumer.
- 25 So the engine performances are based on

```
1 lifecycle costs. The presentation calculates it
```

- 2 the way you have up here.
- 3 MR. MIR: We can -- one way of solving
- 4 this is to -- this is where we're ranking measures
- 5 within the group. Instead of doing it on a 30-
- 6 year mortgage payment for that calculation, you
- 7 could do it the mortgage payment based on the life
- 8 of that measure. And then it would be apples-to-
- 9 apples.
- 10 It's something we'll have to think
- 11 about.
- MR. CENICEROS: Right, and then you
- 13 would --
- 14 MR. MIR: And then that wouldn't have to
- 15 be presented to the consumer because it's just in
- 16 the background to determine the ranking of the
- measures.
- 18 MR. CENICEROS: Right. This is a very
- important point that Jon pointed out here that we
- 20 need to correct for, because it's going to tilt
- 21 the results in a way we wouldn't want, I think.
- 22 PRESIDING MEMBER ROSENFELD: Okay, well,
- you've educated me. I don't know the answer. All
- 24 right, we're into good afternoon. Randy Reidel.
- MR. REIDEL: Commissioners, thank you

```
1 for the opportunity. Randel Reidel; I'm the
```

- 2 Managing Director of the California Building
- 3 Performance Contractors Association. And I always
- 4 wanted to be an afternoon speaker, so, thank you
- 5 for the opportunity.
- 6 (Laughter.)
- 7 MR. REIDEL: I wanted to mention just
- 8 two things. In support of what Erik said
- 9 previously, as representing, I believe it was
- 10 SMACNA group, is that correct? Did I get that
- 11 right? I could go get his card and figure it out,
- 12 but --
- MR. SPEAKER: Yes.
- 14 MR. REIDEL: -- that was correct? Thank
- 15 you, thank you.
- In my earlier career, also at the Energy
- 17 Commission, I had an opportunity to be a board
- 18 member at ACCA, which is the Air Conditioning
- 19 Contractors Association, and one of the things
- 20 that I used to point out to them whenever I had an
- 21 opportunity to speak to them as a group, was
- 22 similar -- I can't quite do it here because you've
- 23 hidden both the supply and returns very nicely in
- this room, but I would say to them, you know, a
- lot of you have become very concerned and are

```
1 adopting being able to take control of the loss
```

- 2 that's happening through duct systems by sealing
- 3 those ducts. And many times they're in the attic
- 4 where it's very hot, so you're insulating them
- 5 better.
- And so that's really remarkable, but
- 7 you're missing a real big part of the duct system
- 8 in the plenum. And that is that we, right now,
- 9 we're walking and talking actually in a large
- 10 plenum that's part of the air conditioning system.
- Because if we could find it, we could
- see the supplies and the returns on the other
- side. So we're just part of the duct system, it's
- 14 where we live.
- 15 So, therefore, the analogy would be is
- 16 the extension of that duct system is to the
- 17 exterior walls of this building.
- 18 So, in support of what he had to say, I
- 19 can think of no better actual contractor that
- 20 would be appropriate for doing a whole house or
- 21 home based approach.
- The other thing is that they are
- required in their sizing of the equipment, at
- least they should be, using sizing calculations,
- 25 room-by-room sizing load calculations. And by

doing so, they need to also understand the air

- 2 infiltration, ex-filtration, the integrity of the
- 3 thermal envelope, windows, et cetera.
- 4 And, again, that is a large part of what
- 5 building performance contractors do.
- 6 One other thing I would mention is that
- 7 when we take care of the envelope, Art, like you
- 8 were concerned about, many times what we do is
- 9 that we're enabling us to reduce the sizing of the
- 10 HVAC system, mainly the air conditioning, almost
- 11 up to half reduction.
- 12 So if we have a 5 ton, many times we can
- 13 take it down to 2.5 or even 2 ton. And, you know,
- 14 you prepared a very notable chart that you use a
- 15 lot in your particular displays or presentations
- 16 that you do, showing the load demand curve on hot
- 17 summer days.
- 18 And if you think about reducing, you
- 19 know, the air conditioning load by changing out
- 20 these systems, based on what we did with the
- 21 thermal integrity improvements, we, many times,
- 22 can reduce sizable amounts of tonnage reduction
- off of the grid.
- 24 PRESIDING MEMBER ROSENFELD: But, Randy,
- 25 if you do in sequence all cost effective measures,

```
1 you will end up at the same result. You may
```

- 2 calculate the air conditioners downsizing first,
- 3 and you'll get half way there.
- 4 But then if you go ahead and calculate,
- 5 I'll give my typical example, insulation and a
- 6 white roof, you will further reduce the air
- 7 conditioning capacity. And it'll show up at the
- 8 end of the run as just the half, the 50 percent
- 9 reduction you talked about.
- 10 MR. REIDEL: Okay, I'm not at a skill
- level to actually debate that with you at this
- 12 time. And I would --
- MR. PENNINGTON: So if the --
- MR. REIDEL: -- ask anybody else to
- please chime in on my behalf.
- MR. PENNINGTON: If the HVAC system is
- the first measure that you choose, you don't make
- 18 any reduction in sizing --
- 19 PRESIDING MEMBER ROSENFELD: Yeah, you
- 20 do, at the end. At least -- I don't know the
- 21 application programs, but as you go in DOEII at
- 22 the last run it takes everything into
- 23 consideration. It tells you how to size the air
- 24 conditioner. And you get credit for having
- 25 painted the roof white, or --

```
MR. PENNINGTON: You're out of savings.
2
       You're out of savings at that point. You've made
```

- 3 decisions already about what investments you're
- 4 going to make. You've spent the amount of money
- 5 that you can afford for that house and you're out
- 6 of savings to get those --
- PRESIDING MEMBER ROSENFELD: Bill, we'll
- have to look at it with a real program, and do it 8
- offline.

- ASSOCIATE MEMBER PFANNENSTIEL: Yeah, 10
- let's --11
- MR. REIDEL: Thank you very much. 12
- 13 PRESIDING MEMBER ROSENFELD: Thank you,
- 14 Randy. Nice to see you here again.
- MR. REIDEL: Nice to see you, too. 15
- PRESIDING MEMBER ROSENFELD: Are we out 16
- of blue cards? Comments? 17
- ASSOCIATE MEMBER PFANNENSTIEL: Back to 18
- Helen, I think. 19
- PRESIDING MEMBER ROSENFELD: Helen. 20
- 21 MS. LAM: Okay, no more comments? Okay,
- so, we going to close up today's meeting by 22
- 23 presenting you the estimated schedule of the HERS
- 24 regulations, which, as I stated at the beginning
- of the meeting, after today's public hearing, we 25

```
1 are requesting that if you have any additional
```

- 2 written comments, to submit them to us by October
- 3 24th.
- 4 And I know that we have a 45-day public
- 5 comment period. But of course, we encourage you
- 6 to submit your comments at your earliest possible
- 7 date. And this way, you know, we will insure that
- 8 we have sufficient time to adequately address each
- 9 of the comments and concerns.
- 10 And so, Bill, I guess at this point we
- 11 can safely say that we will anticipate
- modification to the 45-day language. So, if
- that's the case, then we will not likely be
- 14 adopting the 45-day language at the November 19
- 15 business hearing.
- Therefore, we will anticipate to release
- 17 the 15-day language about early December. And so
- that we can have an anticipated Commission
- 19 adoption date of the 15-day language at the
- 20 December 17, 2008 business meeting. And this will
- 21 be separately noticed.
- 22 And with that, we hope to have the
- regulations take effect on July 1, 2009.
- 24 PRESIDING MEMBER ROSENFELD: Thank you,
- 25 Helen.

1	I realize that before going on, Helen, I
2	have a feeling I saw one tentative hand stuck up.
3	Did I cut somebody off? Did I ignore someone?
4	No.
5	MR. KAMRATH: I think you're referring
6	to me.
7	PRESIDING MEMBER ROSENFELD: Yeah.
8	MR. KAMRATH: No, I was going to help
9	with Randy, but you guys got it figured.
10	PRESIDING MEMBER ROSENFELD: We'll meet
11	offline.
12	Okay, well, thank you very much. Don't
13	forget your comments. Bye.
14	(Whereupon, at 12:15 p.m., the Committee
15	workshop was adjourned.)

CERTIFICATE OF REPORTER

I, PETER PETTY, an Electronic Reporter, do hereby certify that I am a disinterested person herein; that I recorded the foregoing California Energy Commission Committee Workshop; that it was thereafter transcribed into typewriting.

I further certify that I am not of counsel or attorney for any of the parties to said workshop, nor in any way interested in outcome of said workshop.

IN WITNESS WHEREOF, I have hereunto set my hand this 27th day of October, 2008.

PETER PETTY
