## **2022 Energy Code Pre-Rulemaking Do away with Gas-go with electricity**

I think it is important for the future of our planet that we reduce the amount of green house gasses. The rules you are working to create to control what kind of building codes should be instituted for the future should help us do that. It is feasible and necessary that we switch to electric and solar energy rather gas. In the long run it will be better for the environment and the home owners health and budget.
