Title 24

If we are to meet our climate change targets and prevent catastrophic environmental damage, we must move forward with much better standards that promote electrification over use of gas. The proposed standard does not go far enough. We have to do better.

I live in California and I support cutting climate pollution and protecting public health. Please act today to get gas out of new buildings.

The California Energy Commission must set a standard for new buildings in the 2022 Title 24 Building Code that will make new buildings built in 2023 and beyond all electric.

California must have a goal for all-electric new construction if the state is going to meet its climate and air quality goals. We must continue to lead on reducing climate and air pollution.

Sincerely,

Sam Butler
