Reduce Natural Gas More Quickly in New Homes

More than 40 cities have adopted local measures to make sure new buildings are all-electric in the future. Abroad, other countries have established new electrification requirements to get gas out of new buildings, including France which will ban gas heating in new homes starting in 2021.

Now it is time for the state to step in and take similar action so all Californians are protected.

Youâ€™re currently writing the 2022 Title 24 Building Code. You must make sure that this code cycle is used to stop digging deeper into the hole of our dependence on dangerous fossil fuels.

A delay will lock us into decades of climate pollution and cost California more than \$1 billion in unnecessary gas infrastructure. Our health and our climate cannot afford this.
