California Need to Go to All-Electric Buildings Now

You MUST act today to get gas out of new buildings. Prolonging the use of gas makes it VERY difficult to make the SB 32 requirement of 40% below 1990 by 2030. Don't let the CEC be blamed for missing that requirement.

I currently own an electric heat pump for AC & heating and an electric oven and cooktop. And have solar panels. It's as or more cost effective than fossil fuels, and it's *sustainable*. Stop expanding the dangerous and polluting gas pipeline system to more new homes and save construction costs! Save lives with all-electric homes. Save the future and our climate - because scientists have told us and we understand we can not delay this shift ANY LONGER. YOU can do this,

Thank you,
