## **Please Support All-Electric Code for New Construction**

Dear Members of the CEC,

The time has never been more urgent to support an all-electric building code for new construction. All-electric building codes improve the safety, health, resilience, and equity of our communities. They reduce indoor air pollutants, reduce air pollution, and decrease the recovery time after a major earthquake. Many local jurisdictions have already adopted such codes with substantial public support. The technology involved is prevalent, affordable, and can decrease energy costs.

All-electric building are what California needs to build a better future. As we already look towards another unprecedented year of wild fires, there is no excuse for inaction. We need aggressive changes to the building code now.

Thank you for your consideration.  
Emily Gosack, AIA
