## **Electrify**

We have a free source of energy called the SUN, the closets start to our small rocky planet. Hence it makes a lot of sense to harness that energy instead of extracting other finite and dangerous and toxic fuels. It's a not brainer! California will lead by example that other states and nations will follow as we continue the fight on climate change. It's the prudent thing to do. Change is uncomfortable and so is a warming planet and the consequences as a result. So let's do this and adopt the All-Electric provisions in the 2022 Title 24 update.
