Cooking with gas contributes to particulates traveling to and potentially into a HVAC system.

As a HERS rater, working predominantly in income-qualified communities. I've done nearly 50 duct tests experiencing heavy particulate matter at the return grill. Causing me to create difficult taping-off hacks at the returned to complete a test. And this is the first place I go-to and assess a project time frame (adding 15mins to a inspection when heavy PM is present). Gratitude, Â®
