## **Decarbonization in new California buildings and homes,**

My name is Alan Solomon. I live in Palm Desert, CA.

It has been proven that natural gas and/or fossil fuels in buildings or homes produces excess CO<sub>2</sub> in our atmosphere. CO<sub>2</sub>, methane and other pollutants are becoming more and more toxic with each passing day.

This practice of including natural gas hook-ups in new construction has to be stopped. The evidence is clear that all-electric buildings and homes are becoming more popular throughout California for a multiple of reasons. It just makes sense today, to minimize ones footprint as well as minimize your buildings footprint. It is smarter for the future, cheaper in the long run and electrical building technology is becoming more and more efficient for building owners in California and for the American public throughout.

Thanks for your time today,  
Alan Solomon
