Ann	Stratten	La Mesa	CA	91941	<p>Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clear jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more global warming than electric heat pumps.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p> <p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.</p>

Frank	Seewester	Fairfield	CA	<p>94533 Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous air pollution than clean electricity.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p> <p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.</p>
Sharon	Morris	San Leandro	CA	<p>94577 Dear California Energy Commission:</p> <p>As a Californian, I see the effects of climate change. Our summers have gotten much warmer, we have frequent droughts, water shortages, and forest fires in our area, with the associated power outages and general distress. I strongly support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage more healthful climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>We have retrofitted our 80-year-old house with electric heating, cooling, and appliances. We have also installed regrettably gas-heated, on-demand water heating, which reduces gas usage substantially. We would have preferred an electric system, which would have been a better investment for the long term.</p> <p>Powering our homes and buildings with dirty fossil fuels affects our health and is contributing to the climate crisis. Gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous air pollution than clean electricity.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and to protect public health, California must progress to a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p> <p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve.</p> <p>Thank you for your time and careful consideration.</p>

					<p>Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clear</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. Dear California Energy Commission:

US FEDERAL RESERVE BANK NUCLEAR FOSSIL FUEL EXECUTIVE EXTINCTION EXECUTION

...What We Have Now, Is a Broken Up and New Jet Stream, Centered From Greenlands 20 feet of Sea Level Rise of Ice and Snow

Moving Over 17 degrees from the Center of the Arctic. To Greenland, an Is Now Being Pierced, and Lobed

Because of Mantle Methane, Methane Hydrates, Pingo's, Perma Frost, Fracking, all emitting Methane NOW ! and Emitting over 40 - 50 Billion Toxic Tons of Carbon each year Globally.

All this Hot Gas has Melted the Arctic and Will Bring a Blue Arctic in 2021

It Has Pierced the Greenland Jet Stream in to Lobes, Moving it Over 17 degrees from The Center of The Arctic and Stopped over 3 Million years of Glaciation

The Hot Gas Fueled the Insane Arctic, Greenland, and Antarctic Ice Melts.

Has Roared its Global Warming Frontal Lobes with Record Setting Temperatures and Record Setting Snow, and Record Setting Rain.

These Methane, and Carbon Molecules Have Roared Their Increased Water Vapor and Global Warming Gases, That will Set Record Heat, Record Snow, Until Greenland Collapses

109F. PALM SPRINGS CA 4/30/21

100F. SIBERIAN ARCTIC 6/21/20

111F. M VAXICO Gallinas 3/27/21

METHANE NATURAL GAS

Thomas	Anderson	Huntington CA	92649	<p>Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more air pollution than electric heat pumps.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p> <p>The core conclusion of essentially every major independent study on the subject of climate change — including the comprehensive review by the world's leading scientists signed off on line-by-line by most major governments — is that making the transition to clean energy is the only way to avoid catastrophic climate change.</p> <p>There can be no question that the clean energy revolution will be an economic boon. Already clean and renewable energy is cheaper than the competition in many places in the world, and soon it will be cheaper everywhere. The sooner we transition to clean energy, the more jobs we will create and the more money we will save.</p> <p>Thank you so much for your time.</p>

Thank you so much for your time.</p> <p>Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clear jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more greenhouse gas emissions than electric heat pumps.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p>
Sam	Naifeh	San Mateo CA	94402	<p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.</p>

---------	-----------	----------------	--	--	---

Dear California Energy Commission:

As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.

The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean

While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.

Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more

To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.

The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

					<p>Dear California Energy Commission:</p> <p>I'm deeply concerned that Californians like me are already suffering badly from climate change. We're suffering from extreme heat, increasing droughts and wildfires, water concerns and health impacts. We can't afford to delay every action we can take</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clear</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. We need a much more aggressive acceleration to 100% clean electricity for all new buildings right now. We also need to roll out an ambitious new standard</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times mor</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings as well as existing buildings are powered by clean electricity instead of fossil gas for he</p>
Rosalind	Helfand	Los Angeles	CA	90068	<p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. 					<p>Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>I am personally in the process of voluntarily electrifying my 1950s era home. It's not easy and we need more industry adoption to bring the cost down and increased access!</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more air pollution than electric heat pumps.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p>

Drew	Cady	Del Mar	CA	<p>92014 Dear California Energy Commission:</p> <p>It is high time that California behaved like a sustainable culture. We must shift to renewable energy and lead this world out of climate chaos. Anything short of this is simply being part of the problem. As a Californian, I'm already seeing the impacts of climate change. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more greenhouse gas emissions than clean electricity. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p> <p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.</p>

					<p>Dear California Energy Commission:</p> <p>It is past time to cease connecting new buildings to natural gas. With our climate warming at an alarming rate, we need to be decommissioning our oil and gas production as we reduce our consumption of fossil fuels.</p> <p>A simple step is to require all new building in California to be electric. Why would we install the additional capital expenditure of adding gas lines when the asset should be abandoned within twenty years to meet climate goals. Further, the user would b</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clear</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. Susan	Floore	San Francisco	CA	94109	<p>Dear California Energy Commission:</p> <p>I am aware of the climate changes here in California and, as a consequence of that knowledge, I purchased an electric car. I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. I know that the draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more global warming than electric heat pumps. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Transportation is another area where we need to transition to clean energy.</p> <p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time and efforts.</p>
Kevin	Boner	San Diego	CA	92126	<p>Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean jobs. William	Lawrence	Duarte	CA	<p>91010 The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.</p>

				<p>Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clear jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more air pollution than electric heat pumps. And powering up dangerous, expensive and carbon emitting nuclear power plants is a mistake, as well.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p>

--------	----------	------	----	---

Dear California Energy Commission:

Urgent As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.

The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clear

While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.

Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times mor

To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.

The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

Long overdue!!

Do not be dissuaded by selfish special interests and their greed and lies.

Thank you

Joel

Kirschenste Westlake VICA

91361 Dr. J Kirschenstein

Natalie	Shuttleworth	San Francisco	CA	<p>Dear California Energy Commission:</p> <p>As a Californian and former Tennessean, with a home also in Idaho and family in FL, NC, PA, OH, I've been seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>At significant impact financially to me (I am still paying off loans), I put a new "cool roof" and solar panels on my home in 2015 because it was the RIGHT thing to do. I am glad I was among those to lead the way. I also bought a Prius in 2006 which I still drive. I also take BART A LOT Instead of driving.</p> <p>I have saved lots of fossil fuels in these 15 years. But we all need to do more and we need your leadership.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more global warming than electricity.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p> <p>This is an urgent problem to solve. it is affecting ALL of us TODAY - not some time in the "distant" future.</p> <p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.</p>

Thank you so much for your time.</p> <p>Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clear jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more global warming than electric heat pumps.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p>

					<p>Dear California Energy Commission:</p> <p>The draft buildings energy code is a positive step in addressing climate change and indoor air pollution, but should be strengthened to require that all new buildings use only electricity from renewable sources.</p> <p>Powering our homes and buildings with dirty fossil fuels is harmful to public health and continues the environmental devastation of fossil fuel extraction. Gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more climate pollution than electricity. Full electrification of buildings creates more job opportunities that don't expose workers to the toxins in fossil fuels.</p>
Alice	Nguyen	San Jose	CA	95136	<p>CA's transition to 100% renewably-sourced electricity must be accelerated, given the scale of the climate crisis. 100% electrification of new buildings is a crucial component of that transition.</p> <p>Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis.
