<b>Docketed Date:</b>	6/22/2021

*Comment Received From: Natural Resources Defense Council  
Submitted On: 6/22/2021  
Docket Number: 21-BSTD-01*

## **Comments by 3,287 NRDC activists in support of fossil fuel-free building codes**

Dear California Energy Commission:

Please accept these 3,287 public comments from members and online activists of the Natural Resources Defense Council (NRDC), on your draft buildings energy code.

The draft buildings energy code would encourage healthier, more climate-friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs.

While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis.

And gas-fired appliances and burning gas for heat and hot water in homes and buildings cause more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to a 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.

The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

-----	--------	------------	----	--

Dear California Energy Commission:

I'm writing to endorse your draft buildings energy code.

The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean

While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.

Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times mor

To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.

The action you take today will help ensure that California can have the healthy clean energy future we need and deserve.

We also need tax credits or other financial incentives to encourage businesses and home owners to convert existing natural gas cooktops, water heaters, and furnaces to electric power.

Jay Atkinson and Ariel S. El Sobrante CA

94803 Thank you so much for your time.

Dear California Energy Commission:

As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.

The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean

While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.

Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times mor

To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.

The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

No more fossil fuel!

Don't rape the earth for profit

Diane

Odello-Boy Pleasant Hill CA

Margaret	Rogers	Redwood CICA	94062	<p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.</p> <p>Dear California Energy Commission:</p> <p>As a Californian living near a forest, and having had several years in a row of orange skies and unbreathable air at the end of the dry season (which keeps getting drier and longer), I'm quite troubled by the impacts of climate change.</p> <p>I'm writing to support your draft buildings energy code.</p> <p>This plan is an excellent step in the right direction. Thank you. Even more visionary would be to require all-electric construction, and set a reasonable timeline for the state's transition to 100% clean electricity for all new buildings.</p> <p>By reasonable I don't mean good for the environment - all that needed to happen yesterday, but reasonably structured to allow industry to adjust. It's time we don't really have, and to not define a timeline for a complete transition away from fossil fuel.</p>
Laurent	Liscia	El Sobrante CA	94803	<p>Let's work together to set an example for the rest of the world, as California always has, and help the planet finds its way back to a more sustainable climate, so that our kids (your kids) actually have a place to live tomorrow. Thank you for your plan and</p>

				<p>Dear California Energy Commission:</p> <p>As a Californian living in Sacramento, I'm already seeing the impacts of climate change firsthand. The weather has definitely changed since I was living here as a child -- and not for the better. Therefore, today I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more greenhouse gas emissions than electric heat pumps.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p>

Dear California Energy Commission:

As a Californian, and an environmental quality commissioner. I see the need to immediately pivot away from new gas installations in order to have hope for meeting the Paris accord 2 degree damage limits.

You and I both know that more gas assets are a mistake that strands society's assets into polluting technologies that have to be expensively undone.

You have the power and the responsibility to pivot away from gas in this code cycle and make it all electric.

That is what the IPCC meant when they said we needed to change in ways that were:

Rapid

Far Reaching and

Unprecedented.

Please make our lives easier at the local levels by standing up for all electric new construction right now in this code cycle, so we don't strand billions of dollars in wasted assets, expensive retrofits and otherwise not needed added carbon capture and sequestration.

Thank you for considering the advice from my long career as an environmental engineer.

-Tom Kabat

					<p>Greetings California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand with so many of my favorite hiking places burned and closed — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more air pollution than electric buildings.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p>			
James	Inskeep	Fremont	CA	94555	<p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.</p> <p>Dear California Energy Commission:</p> <p>As a mom, I'm distressed that my gas stove is bringing pollution into my house. When I can afford to swap it out I will.</p> <p>It's time to draft building codes so that other mothers can raise their children with better air quality.</p> <p>We also need electric buildings in order to respond meaningfully to climate change. We're again in a drought. We will again have an epic fire season. Let's respond. Let's be smart and bold. Our kids deserve action.</p>			
Sari	Fordham	Riverside	CA	92506	Thank you so much for listening to suburban moms like me.

And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times mor</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p>
Clyde	Willson	Oakland	CA	94606	<p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.</p>

Scott	Amundson	Oakland	CA	94602	<p>Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more air pollution than electric heat pumps.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p> <p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.</p>
Du	Ng	San Jose	CA	95123	<p>Dear California Energy Commission:</p> <p>The draft buildings energy code should be strengthened to require 100% electrification of new buildings. Electrification of the building sector is essential to CA's transition to 100% clean energy.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis and indoor air pollution. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution.</p>

Dear California Energy Commission -

Respectfully,

As a lifelong coastal northern Californian and an over four decade Rural American — one of multiple millions — no matter where Rural people stand on the political spectrum we all share common insights, sensibilities, observations and realities of daily

Additionally Rural people share the consequences of suburban and urban dwelling policy makers,À mandates and decisions.

That said, some are welcome, such as the draft buildings energy code.

As you aware, the draft buildings energy code would:

- . encourage healthier, climate friendly buildings
- . improve indoor air quality
- . boost energy efficiency
- . reduce the need for dangerous fossil fuel infrastructure
- . save residents money on utility bills
- . create new clean energy jobs

I trust we,Àd agree:

- . this plan has merit
- . however it falls short of requiring an all-electric construction
- . more needs to be done to accelerate California,Às transition to 100% clean electricity for new construction
- . relying upon fossil fuels to power our homes and buildings impacts our health and the (inter)national climate crisis

Please ensure California responsibly:

- . addresses climate crisis concerns
- . transitions to an 100% clean energy economy
- . protects public health, safety and civic-civil-human rights
- . creates a future where all new construction is powered by clean electricity rather than relying upon fossil fuel for heat and hot water

With appreciation for your years of public service, along with your time and thoughtful consideration of this far reaching concern that effects present and future generations — including your family and descendants — historically documented for all to

				<p>Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clear</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. Thank you so much for your time.</p>

				<p>Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clear jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more global warming than electricity.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p>	
Roxanne	Boyle	Redwood VCA	95470	<p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Jessica	Dardarian	Folsom	CA	95630	<p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.</p> <p>Dear California Energy Commission:</p> <p>The devastating climate change impacts that are already wreaking havoc in California demand that we accelerate the transition away from fossil fuels. Powering our homes and buildings with dirty fossil fuels also impacts our health. Therefore, I am writing to support your draft buildings energy code.</p> <p>We are planning to replace our household gas with all-electric heat in the coming year or two, despite the substantial expense, because it is so important that we all address the climate crisis. Requiring all-electric new buildings should be a no-brainer.</p>
Nancy	Rader	Berkeley	CA	94708	<p>Thank you.</p>

And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times mor</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p>

					<p>Dear California Energy Commission:</p> <p>Please do whatever you can to rid our state of any dependency on fossil fuels. Considering my age, I understand I won't be here to see the good results, but my great-grandchildren and their children _may_ live in a better climate if action is taken in 202</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clear</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times mor</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p>
Frances	Whiteside	Montclair	CA	91763	<p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Krys	Call	Santa Cruz	CA	<p>Dear California Energy Commission:</p> <p>I am writing in support your draft of a buildings energy code. I agree with you that we need more climate friendly buildings with better indoor air quality and energy efficiency, and that we also need to reduce the need for gas infrastructure and to reduce</p> <p>Also, because of Covid, we need to quickly generate new clean energy jobs building all-electric homes.</p> <p>Could this buildings energy code be altered to include a requirement for all-electric construction?</p> <p>As a native Californian who has lived here all of my life, I know that running homes and buildings with dirty fossil fuels heats up the earth and makes smog.</p> <p>Gas-fired appliances and burning gas for heat and hot water in homes is polluting, making many times more nitrogen oxide air pollution than all power plants in the state combined.</p> <p>My neighborhood has hotter weather, fiercer winds, and more smog than it ever did before. And wild fires in California seem to get worse every year. For the climate, we need clean energy structures.</p> <p>For people, we need clean energy housing that is affordable and construction jobs that are enough to live on. Gentrification is making this harder by changing the housing market.</p> <p>Silicon Valley has driven up the price of houses where we live so that we cannot afford to sell our home because we cannot afford to buy another one in a less expensive rural area as we have planned to do for about thirty years. This is happening all over</p> <p>But obviously, before that economic concern is the importance of getting right at the climate crisis. I hope that you will change this code to require a transition to an 100% clean energy economy as a goal that we meet sooner rather than later. Secondarily</p> <p>95060 Thank you for the code as it is, and I hope it will go farther in addressing global warming. Thank you very much for your time.</p>

Sherrill	Futrell	Davis	CA	<p>95618 Dear California Energy Commission:</p> <p>As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clear</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times mor</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p> <p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.</p>

					<p>Dear California Energy Commission:</p> <p>As a native Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. This is vital to allow California to grow without the destruction caused by reliance on gas. How many massive fires does it take to get our attention? We can transition to healthier buildings in every town and city, but we must do it now.</p> <p>The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs.</p> <p>While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.</p> <p>Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more global warming than electricity.</p> <p>To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.</p>
Sharon	Petersen	Huntington CA	92646	<p>The action you take today will help ensure that California can have the healthy clean energy future we need and deserve.
