Water and Wastewater Sector

The California water sector is a significant consumer of electricity in the state. There is still plenty of innovation and work to do in getting this sector up to speed with energy efficiency in water treatment, water conveyance and distribution, wastewater treatment, and water reuse. There is also still plenty of work to do in enabling this sector to shift energy loads and respond to DR events and programs. The lack of funding and planning in the current EPIC plan for solicitations that will reach the water sector is disappointing and a missed opportunity.
