Observed 3x55 gal drums of waste (1 empty, 1 nearly empty) on-site demonstrating a possibility to accumulate more than 55 gallons or 500 lbs of a hazardous material. Liquid Nitrogen (128 gal) previously reported on 11-24-16 no longer on-site. NOTE: Determine if you will ever reach or exceed state reporting thresholds (eg 55 gal liquid, 200 cuft gas, 500 lbs solid) again in the future. If not, remove extra 55 gal drums and do not accumulate or have capacity to accumulate 55 gallons or more of liquid. Per uniform hazardous waste manifest review, last time waste on-site exceeded threshold was on 4-8-13 at 600 lbs of lab debris.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-12-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Facility machines parts for wide range of industries. Material is cleaned using petroleum distillates or acetone baths, or via ultrasonic cleaning which may use solvent or water. Deburring occurs via a tumbler and soapy water waste is collected with the solvent waste. Certain inorganic metal bearing wastes are not permitted to be mixed with solvents unless greater than 1% Total Organic Carbon (TOC). It is likely that the soapy water contains sufficient TOC to allow it to be consolidated with the solvent waste (regardless of presence of certain metals). The following minor violations were corrected at time of inspection: 3x55 gal containers of used oil - incomplete marking EPA ID # CAL000326807 has been inactive since 6-30-2008.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)

Violation Description: Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.

Violation Notes: Facility is currently disposing of spent paint filters in the municipal trash. Manage as hazardous waste or perform testing. Testing required includes cam 17 metals TTLC and potentially an STLC (if TTLC is greater than or equal to 10 times the STLC regulatory limit). If waste meets CA toxicity, determine if waste is a federal RCRA hazardous waste by performing the TCLP or manage as RCRA hazardous waste. Also, facility shipped "Dirt contaminated with motor oil" to Crosby and Overton in Long Beach, CA even though Crosby and Overton indicated that lead and chromium is high (per TTLC). Receiving facility indicated they would receive the waste and perform the required STLC once waste is received. In the future, for a proper waste determination and manifesting, testing must be done prior to shipping this hazardous waste to determine if it is a California hazardous waste and if so, if it is a RCRA regulated hazardous waste (per Federal TCLP testing).

Eval Notes: Facility does not currently store any hazardous materials above threshold quantities. Analytical machine using liquid argon has been out of service for over a year and 61-gallon dewer has been removed from facility. Facility wishes to remain in HMBP program as the liquid argon will be stored on site once analytical machine is repaired. HMBP has been submitted through FrontCounter on 4/1/19.

Eval Notes: Facility is an environmental testing and chemical analysis lab generating waste acids containing heavy metals (chromium). Facility walk though performed with President Harry Fujimoto. Waste corrosives are primarily generated from acid atomic absorption (A.A) machine, which utilizes nitric acid to digest metals from samples. Waste nitric acid containing heavy metals (primarily chromium) is collected inside a 3-gallon plastic carboy and transferred to 30-gallon poly drum in back storage area when full. Additionally, A.A machine uses only nitric acid for machine cleaning and purging of contaminants and is managed as hazardous waste. Additionally, facility will also generate waste corrosives from wastewater samples. Leftover wastewater samples from testing are pH tested to determine if liquids meet hazardous waste criteria. Notes: - State ID CAL000364849 (ACTIVE) - Hazardous waste areas are inspected daily by Mr. Fujimoto. - Fire extinguishers were observed as [Truncated]

AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-08-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a hazardous waste inspection. Facility fabricates, tests, and cleans electronic devices. Performed a walk-through with Annie Tran and observed the following hazardous waste: -Non-RCRA hazardous waste solids (wipes contaminated with gold, silver, and solvent from cleaning activities): 1 x 55 gallon poly drum in warehouse Light hand soldering is done on-site with lead-free solder. Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: 22 CCR 12 66262.34(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(a)

Violation Description: Failure to obtain a permit or grant of interim status to accumulate hazardous waste longer than 90 days.

Violation Notes: Returned to compliance on 10/21/2015.

-Per Mr.

Nhin and Chieu Hoan, waste coolant has been accumulated on-site for app. 1 year. Note that upon accumulating 27 gallons of hazardous waste, you may store hazardous waste on-site for a maximum of 180 days.

Violation Date: 11-19-2019

Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes: Observed several rags contaminated with oil and possible metal shavings that were located near the machinery and seemed to be used to absorb excess coolant or used oil. Several rags that were heavily saturated were also observed on the shop floor. The contaminated rags appear to meet the definition of a hazardous waste but are not currently being managed as hazardous waste nor as reusable soiled textile material. According to Mr. Nhin, current practice is to dispose of rags in the municipal garbage. Determine if the rags contaminated with hazardous waste meet the definition of a reusable soiled textile material under HSC 25144.6, in which case they can be laundered by a commercial laundry, or if they meet the definition of a hazardous waste, in which case they must be managed as a hazardous waste. Note that rags sent to a commercial laundry cannot release free liquids, and may not have been used for clean up of a hazardous waste spill.

Violation Description: Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years.

Violation Notes: According to Mr. Nhin, absorbent is typically used for machine coolant spills, however none was available at the time of this inspection. Observed several saturated rags in areas of small coolant spills in lieu of absorbent material. During manifest review, no manifests could be provided that indicated SBC Manufacturing manages saturated absorbent as hazardous waste. Provide manifests indicating that saturated absorbent is being managed as hazardous waste, or if unable to, begin managing saturated absorbent as hazardous waste.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate

that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Local Agency: Not reported
RB Case Number: 43S0379
File Location: Not reported
Potential Media Affected: Not reported
Potential Contaminants of Concern: Dichloroethene (DCE), Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Benzene
Site History: The Site consists of a 1.26-acre parcel located at 355 Sango Court, Milpitas, Santa Clara County, California. The Site is currently developed with an approximately 15,000-squarefoot single story light-industrial building. Current and former property tenants have conducted similar truck and/or other vehicle service and repair activities at the facility. Hazardous materials and wastes documented as used/generated by the current and many of the previous tenants included a variety of vehicle repair-related materials. In addition to the typical vehicle maintenance and repair materials utilized by most of the property tenants, a caustic soda dip tank and a methylene chloride dip tank were utilized outside the building in a steam rack area by two former tenants between approximately 1997 and 2000. Prior to installation of the existing clarifier, a previous clarifier was present in a similar location. The former clarifier was removed in 1997 under regulatory agency oversight. Verification sampling conducted following clarifier removal documented the presence of significant concentrations of petroleum hydrocarbons in soil. Approximately 15 cubic yards of soil were overexcavated from the clarifier pit. The Regional Water Quality Control Board (RWQCB) issued case closure for the clarifier removal in March 1997. In the closure letter, the RWQCB stipulated that they must be notified if plans were made for a change in land use or if excavation or significant disturbance in the former clarifier area was being considered.

Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Dichloroethene (DCE), Trichloroethylene (TCE)
Site History: Several businesses have operated in this facility since it was completed in May 1977. A circuit board manufacturer and a plating business once operated on the site, the current operator, Viasystems Technologies Corp, LLC, is a circuit board manufacturer. TCE was detected in soil, groundwater, and soil vapor. Soil was excavated to remove source of secondary contamination in December 2019. Residual post-excavation TCE concentrations in soil vapor and groundwater exceed screening levels, however TCE concentrations are appropriate for development as an open-air park and roadway on-ramp. A deed restriction was recorded in November 2020. If any buildings will be built on the site at any time, the Water Board must review and approve design with respect to vapor intrusion concerns. Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Eval Notes:	Annual underground storage tank (UST) compliance inspection. All UST system leak detection equipment was tested today by UST Service Technician Marcus Garcia of Service Station Systems, Inc. and functioned properly except as noted above. Mr. Garcia has current ICC California UST Service Technician certification (exp. 11/1/2021), Veeder-Root certification (exp. 10/17/2021), and Vaporless Manufacturing (VMI) LDT-890 line leak detector tester certification (exp. 4/25/2021). The UST systems are equipped with continuous vacuum/pressure/hydrostatic (VPH) monitoring. The Veeder-Root model 794380-303 hydrostatic tank annular sensors were tested by raising them out of the tank interstitial fluid to obtain Low Liquid audible & visual alarms on the Veeder-Root TLS-350 monitoring console then inverting them to obtain High Liquid alarms. Eval Notes: Hazardous Materials Business Plan (HMBP) was electronically submitted via the California Environmental Reporting System (CERS) website on 1/2/2019. The information has been reviewed and is Accepted. At the time of this inspection, the facility had the following hazardous materials on-site in HMBP-reportable quantities: Regular Unleaded Gasoline, Premium Unleaded Gasoline and Diesel. Propane is handled in small cylinders that qualify for exemption pursuant to the HSC - 25507(b)(5). There is no compressed or cryogenic Carbon Dioxide onsite. In the car wash, Ryko White Foam Detergent is handled in 55 gallon drums. Other car wash chemicals are handled in 15 gallon drums. Review of the Safety Data Sheets indicate that car wash chemicals other than Clean Cut 360 Presoak are hazardous solely as irritants. The quantity for each type observed on-site is well below the 550 gallon reporting threshold specified in HSC - 25507(a)(4)(A). HMBP employee training records were reviewed [Truncated]

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Solids sent to second press, with liquid directed to hold tank for analysis and sewerage. Supernatant from presses redirected to settling tank for re-treatment. Sludges from both presses are combined in hopper and then added to tank attached to scrubber. Scrubber blows air over sludge to facilitate drying prior to addition to cubic yard box for disposal.

Eval Notes: Cyanide treatment unit unit consists of two 80 gallon nalgene tanks and one holding/transfer sump tank. cyanide rinses and equipment rinses are currently batched treatment in two stages using hypochlorite. Prior to transfer to settling tank to commingle with other wastes, ORP is measured to ensure breakdown of cyanide. Waste min processes include extended length use of primary static rinse and 2 stage spray rinsing of all cyanide plated parts. Splash boards noted between rinses to direct rinsate to tank, not containment. Site has indicated in its notification that it is treats cyanide wastes greater than 5000 mg/l under "permissible dilution" allowances. This is not a practice of the facility per personnel. SUGGEST MODIFYING NOTIFICATION TO REFLECT THIS. Operating logs are kept noting volumes of waste to be discharged with final (pre-discharge) concentrations of nickel, copper, cyanide, and pH Phase I filed 9/22/08 Reviewed CERS submitted information (2/15/17) [Truncated]

cleaning and acid/caustic based cleaning and surface prep. Facility utilizes onsite batch treatment of most dilute wastes (rinses). Wastes are sent directly from spent rinse baths to treatment without interim management or holding, and as such are exempt from counting under federal rule (40 CFR 261.5(c)(5)). Process generates sludge which carries F006 waste code. Routinely generates and treats onsite 300 gal per day batches of dilute metal bearing (mostly Ni, Cu), cyanide, and acid/caustic rinses and wastes. Last documented hazardous waste training provided 6/2016. This is more than one year ago, please arrange for training as soon as possible. Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require DTSC to pursue corrective actions. Aptos Corporation was a tenant and operated at the site from 1994 to 2004. The company provided wafer bumping and plating services to the semiconductor industry and used the Site for office and warehousing purposes. Aptos Corporation operated an acid neutralization tank under permit by rule to treat wastewater from its plating operations. The acid neutralization tank was closed and the closure and post-closure reports were submitted to the Milpitas Fire Department. Aptos Corporation ceased its operations on the site around 2004 to 2005. The site is on one of four parcels that is part of the Centre Pointe Business Park site, where the Regional Water Quality Control Board (RWQCB) has been overseeing investigations since 2007. of the Centre Pointe Business Park site has been attributed to an off-site source. Residential development is planned by the current owner of the Centre Pointe Business Park site and RWQCB indicated in a June 2015 letter to the current owner that it intends to oversee the development and implementation of vapor intrusion mitigation measures.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain

limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality. ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site History: The site was formerly a Texaco service station before being purchased by Amerco/U-Haul in 1977. At the time of purchase, there were four underground storage tanks including two 10,000-gallon underground gasoline fuel tanks, on 10,000 gallon underground diesel fuel tank, and a 250 gallon underground waste oil tank. Wallacc-Kuhl & Associates, Inc. (WKA) stated in a report dated April 7, 1992, that two of the gasoline fuel tanks were removed on August 6, 1986. Over a period of 10 years (1985-1995), several different consulting firms performed various groundwater monitoring and remediation programs on the site. In 1985, Terratech, Inc. of San Francisco, California installed two groundwater monitoring wells (MW-1 and MW-2) in the area of the former underground fuel storage tanks and the former underground waste oil tank, respectively. There is an active water supply well located on this property.
