Subject: **San José Data Center (19-SPPE-04) Response to Bay Area Air Quality Management District's Comments on Draft Environmental Impact Report**

Dear Ms. Worrall:

On behalf of the Microsoft Corporation, the Applicant for the proposed San José Data Center Project (Project), we are providing the enclosed comments in response to the Bay Area Air Quality Management District's (BAAQMD) comments on the California Energy Commission's Draft Environmental Impact Report (DEIR).

If you have any questions on this comment letter, please contact me at (916) 769-8919.

Sincerely,

A handwritten signature in black ink that reads "Jerry Salamy".

Jerry Salamy
Project Manager

Enclosure: Applicant Responses to the BAAQMD's Comments on Draft EIR

Responses to the Bay Area Air Quality Management District's Comments on Draft San José Data Center EIR

The Bay Area Air Quality Management District (BAAQMD) provided comments on the San José Data Center (SJC) Draft EIR (DEIR). Specifically, the BAAQMD mistakenly states that the California Public Utility Commission (CPUC) has prohibited the use of the natural gas generators from participating in load shedding and/or demand response programs implemented by Pacific Gas & Electric Company (PG&E) through its Base Interruptible Program (BIP). BAAQMD cites to CPUC Decision 16-09-056. The BAAQMD fails to recognize that the CPUC modified Decision 16-09-056 on June 21, 2018, with Resolution E-4906 to allow the use of the natural gas generators using renewable fuels as specified in the DEIR. Specifically, E-4906 modifies the prohibition of Decision 16-09-056. In the Findings of Resolution E-4906 at paragraph 102 is the operative text:

102. If a fuel has received renewable certification from the California Air Resources Board, it is exempt from the prohibited resource policy in D.16-09-056.

In addition, the BAAQMD states “However, staff is concerned that the DEIR’s finding of less than significant hinges on future, ongoing procurement of renewable fuels with insufficient assurances that this measure will be enforced.” As noted in the Applicant’s comments on the DEIR, it has accepted Staff’s mitigation measures requiring it purchase renewable natural gas (RNG) to be injected into the PG&E system for the total energy use of the natural gas generators for the SJC project and requiring the Applicant to use renewable diesel for the two administrative generators. The natural gas generator supplier, Enchanted Rock, confirms that significant new supplies of RNG from 158 specific projects are planned or under construction due to the state’s decade long leadership in low carbon fuel standards. Enchanted Rock has also confirmed with their preferred RNG supplier that they can provide the volume RNG identified for this project, to cover up to 509 hours of annual generator operating time for up to 99 megawatts, starting in 2024.

Additionally, Table 1 presents current/proposed RNG projects provided by the RNG Coalition. The highlights of Table 1 are presented below and reinforce the significant growth in the RNG supply industry based on current market incentives and conditions. Anecdotally, developers are more established, projects are bigger, and supply will expand rapidly from these identified projects.

- 135 existing organic waste biomethane facilities
- Two-thirds are in Western Electricity Coordinating Council (WECC) region
- Known projects planned or under construction will grow the market by 117 percent
- Three-quarters of growth will be in WECC region

Finally, to drive further supply growth, California’s legislative and regulatory track record supporting organic waste capture, biomethane development, and use is extensive. As a result, RNG as a renewable fuel is expected to be a core part of the state’s strategy to decarbonize the energy sector. Below is a sampling of relevant legislative and regulatory activities in California in support of biomethane development.

Legislative Activities:

- 2006 - AB32 Allows the CARB to implement mechanisms to achieve greenhouse gas emissions reductions. The CARB implemented the Low Carbon Fuel Standard in 2011 and has taken steps to ensure a robust program over the years, driving significant RNG supply development.
- 2012 - AB1900 Requires the PUC to adopt policies and programs to promote in-state production and distribution of biomethane.
- 2015 - SB350 Sets out state's goal to increase the procurement of electricity from renewable sources. California's Renewable Portfolio Standard includes biomethane as an eligible energy source.
- 2016 - SB1383 Sets out emissions reductions goals for methane and other short-lived climate pollutants and requires state agencies to consider and adopt policies and incentives to significantly increase the sustainable production and use of RNG. Importantly, effective January 2022, every jurisdiction in California is required to provide separate organic waste collection. The expected increase in feedstock will promote even more RNG development. The state's CalRecycle guidance states that "[j]urisdictions can select from a variety of organic waste collection services to match their unique communities and local infrastructure, while producing clean streams of organic feedstock that can be recycled into high-quality, marketable recycled products, including compost, renewable natural gas, electricity, and paper."
- 2018 - SB1440 Requires the CPUC to adopt biomethane procurement targets for the gas utilities.
- 2020 - AB3163 Expands the definition of RNG to include energy from additional forms of organic waste, including vegetation removed for wildfire mitigation, agricultural residues, and other sources.

Regulatory Activities:

Under CPUC Decisions 15-06-029, the biomethane incentive program provides an incentive covering up to 50 percent of an RNG project's interconnection costs, with a cap of up to \$1.5 million per project. The program is capped at \$40 million statewide. In 2016, AB2313 increased caps for incentive funding. The program still has \$10.5 million in incentive funding remaining with nearly \$50 million in requested incentives in the queue.

Under Decision 17-12-004, the CPUC established a framework for the gas utilities to implement dairy biomethane pilot projects. The program has funded several methane collection projects, including PG&E's first biomethane facility which went operational in December of 2021.

Under CPUC Decision 20-12-022, SCG and SDGE may implement voluntary RNG tariff pilot programs to offer RNG to their residential and commercial/industrial customers.

Under Decision 20-12-031, the CPUC approved a standard biomethane interconnection tariff and operating agreement for use by the utilities.

The CPUC issued a proposed decision in January 2022 to implement a biomethane procurement program under SB1440.

These data points strongly support that there is and will be an ample amount of RNG supply required to satisfy the goals of this project, future data center projects, and the legislative and regulatory intent of the State of California.

Table 1 Current and Planned California Renewable Natural Gas Projects

Feedstock(s)	RNG Project Name	City	Pipeline Injected	End Use	Status
Ag Waste	4K Dairy (Calgren Cluster)	Pixley	Yes	Transportation Fuel	Operational
Ag Waste	Ackerman Dairy (Aemetis Cluster)	Stanislaus County	Yes	Transportation Fuel	Operational
