Close Diablo Canyon Nuclear Power Plant on schedule

Too many times nuclear power is labeled "clean energy." Wrong. The front and back ends of the technology are dirty and dangerous. Consider the devastation of lands where uranium is mined and refined. The people there, including indigenous tribes, have been subjected to cancer clusters, contamination of clean water sources, and devastated quality of life. At the back end, we have toxic waste that will last for longer than any containment known to man. People can live with a little less energy. But this incomplete technology should never have been released on mankind. Close Diablo Canyon on schedule, 2024 and 2025.
