Need nuclear in the mix

Renewable power would be great, IF we had a good way to store the energy. For now, we back up renewables with natural gas. We need to reduce carbon NOW. Delaying the shutdown of Diablo would reduce our greenhouse gasses tremendously. In the US, we have shown that we know how to keep nuclear power safe. Diablo Canyon has been analyzed, and the science says it is very safe. Let's keep it running until the science says it is not safe.
