## **Diablo Canyon is our only hope!**

Keeping Diablo Canyon running is critical for the state of California. With Climate Change at our doorstep and temperatures rising, we will continue to need more and more electricity. The alternatives are not an option...more fossil fuel use through natural gas and brought in from other states? How will California ever meet its lowered emissions goals? Certainly not with natural gas. Solar and wind power can't begin to provide the energy capacity that the state of California requires. And there is nowhere near the generation of power as compared to nuclear energy. There has NEVER been any sort of incident at Diablo and it is operated by highly educated and experienced engineers commanding high salaries....yet another reason for the continuation of the licensing and operation. The economic impact of closure will be devastating to the community when considering the employment that will be lost as a result. Don't close Diablo! It would be sheer folly to do so since nuclear energy is the cleanest and safest source of power.
