Keep Our Largest Single Source of Electricity Open

Diablo Canyon Nuclear Power Plant is California's largest source of carbon-free electricity. We must keep it open. It makes no sense to close down Diablo Canyon while California continues to burn fossil fuels to make electricity.

Diablo Canyon can continue to generate clean electricity for at least another 20 years and it can do so affordably. If needed, it is also a great energy source for desalinating water or producing hydrogen without CO2 emissions.

Nuclear power is one of our safest sources of energy. In fact, no member of the public in the U.S. has ever been hurt by a nuclear power plant accident. In addition, no one has ever been hurt by nuclear waste (spent fuel) from a civilian nuclear power plant in the history of such plants worldwide.

Diablo Canyon needs to keep running for a long time to come!

Sincerely,
Lynda Williams
