Keep Diablo Open and expand new nuclear

Nuclear power is a vital tool for California's goals of green energy security. Short-sighted action has led to closures of several nuclear plants in California in the past, directly leading to energy insecurity, increased energy costs for Californians, and a loss of a great deal of clean, reliable energy. Diablo Canyon, as the last remaining nuclear plant in the state, is essential to California, and must remain open. Furthermore, I would hope California had the foresight, initiative, and willpower to expand nuclear power with new builds, adding additional resiliency with clean, reliable nuclear. But should California choose less suitable or dirtier options for energy production, at least I would hope that they continue operating Diablo as long as possible. For the climate, for Californians, and for energy security.
