Diablo Canyon

I support the continued operation of the Diablo Canyon Nuclear Generating Station. The Diablo Canyon plant provides large amounts of safe, clean, reliable, and dispatchable electricity to California. As we all know, adequate electrical resources are required to maintain the state's quality of living. Arbitrarily removing thousands of megawatts of generation capability from California's grid would be a foolhardy action with no benefit to its citizens.

I am a retired nuclear engineer with over 40 years of experience in the nuclear industry covering the detailed design of three commercial nuclear power plants; the operation of two test reactors for the Department of Energy; and the design and operation of a multitude of high-level, low-level, and transuranic treatment, storage, and disposal facilities. I was born in Southern California and lived and worked there until 2000. I currently maintain a California Professional Engineering license.
