Support for extending Diablo Canyon life

As a Licensed Professional Engineer that specializes in energy and an environmentalist I am in support of keeping Diablo Canyon Nuclear Plant operating past 2025. This plant provides green electricity 24/7 365 days per year with a capacity factor that well surpasses any other green electric power supply. The battery technology unfortunately is not at utility scale at a reasonable price point. Electric power reliability is critical. Brown and Black outs cause deaths. California reliable green power is critical to California's successful transition to a more green grid. The record shows that States and Countries that have shut down nuclear plant have increased carbon emissions even with aggressive geothermal, biomass, wind and solar incentives.
