Keep Diablo Canyon open

Diablo Canyon needs to continue operation if California has any hope of reaching its climate goals. Shutting down this power plant would be equivalent to removing over 40% of all installed solar in California. If we are serious about combating climate change we cannot voluntarily take a massive step in the wrong direction. Recent history shows that when a nuclear plant is closed natural gas is what replaces it. Just look at New York's misguided decision to shut down Indian Point Energy Center in 2021 - almost all of its capacity was replaced with natural gas and as a result New York's emissions have risen significantly.

Reducing emissions while ensuring grid reliability is of the utmost importance and Diablo Canyon plays an irreplaceable role in accomplishing this. Please make the right decision for California and the planet, keep Diablo Canyon open.
