Save Diablo Canyon to help stop climate change!

Nuclear energy is crucial for stopping climate change.

Diablo Canyon produces clean, carbon-free energy. Prematurely closing the plant is equivalent to tearing down every single wind turbine in California.

And what would replace it?

Fossil fuels, resulting in an extra 15.5 MILLION METRIC TONS of GHG emissions between now & 2030.

That means more droughts, floods, and fire tornados.

We must not allow this to happen!

Support legislation that ensures the continued operation of Diablo Canyon past 2025.
