Keep Diablo Canyon Open

I'm a 71-year-old retired remodeling contractor, and I consider myself an environmentalist. For most of my adult life I was opposed to Nuclear generation of electricity. But as I grew older and better informed, I learned that most of what I believed about Nuclear power was simply wrong. After doing years of reading and research, I now understand that Nuclear generation of electricity is the safest, cleanest and most reliable method we have. Many environmental groups would have you believe that the opposite is true. I used to be one of those people. But Knowledge and truth are wonderful things. Armed with that knowledge, I changed my mind. I want to keep as many of our existing Nuclear fleet open as possible, including Diablo Canyon. California cannot afford to lose the reliable, non-polluting power it delivers 24/7/365. Trying to replace it with expensive, intermittent, weather-dependent wind and solar will make blackouts more likely. Gov. Newsom, is this the legacy you want to leave: The governor who had a chance to save clean, reliable electricity, but choked instead? Please, don't be that guy. Save Diablo Canyon from your short-sighted predecessors and poorly informed environmentalists. Thank you, Peter Mergen
