Keep Diablo Canyon Open

The choice between zero-carbon nuclear baseload power and polluting natural gas combustion plants could not be more simple. We are NOT in a position to shut down the largest source of clean energy in our state and to do so would be a foolish step backwards from our emissions goals. Diablo Canyon is safe and reliable, and it deserves an investment to keep it that way for as long as possible. In my opinion we should be increasing nuclear power generation overall but considering the political and social environment I'd be happy just to see Diablo Canyon remain operational until it can be replaced with true renewables.
