Keep the Plant Open!

The Diablo Canyon power plant produces cheap power for more than three million people. If it were to be closed average electric bills will go up in the near term, hurting working families most. These three million that the costs of living in California already harm will also have to survive on more expensive coal and natural gas plants. The plant is not only helping keep power cheaper for working families, but also stands as a substitute for worse coal and gas plants.

It's easy to sit in a coastal multimillion dollar home and wax poetic about the downsides of nuclear power, but the reality is that it is cheaper, greener and more environmentally just to keep Diablo Canyon running. Keep the plant, Save the planet!

Thanks,
Joe
