Stand By Diablo Closure

A safe, planned closure of Diablo Canyon nuclear plant remains more urgent than ever amidst climate, seismic, AND energy disruption. As the world trembles over threats to nuclear plants in war zones, as weather, ocean, and seismic instability loom, we need to stick by a wise decision to dismantle this aging and unsafe nuclear plant, using our resources to provide energy that is more truly fossil free through wind and solar. We are living in fearful times where voices that do not understand the dangers of nuclear are pushing for its return to our grid. Please remain steadfast in rejecting this dangerous technology for our state, nation, and world.
