I like AC and you do too

I like running the AC in summer, I'm sure you do too. But I'm seriously worried about two things first grid reliability and second greenhouse gas emission. Shutting down the Diablo Canyon Nuclear power plant is both climate vandalism and grid vandalism.

It will lead to higher greenhouse gas emissions and decrease energy resilience. It produces 12% of all California energy and cannot be easily or quickly replaced by wind or solar. Thus natural gas will step in to take its place putting California many steps behind on its route to Zero Carbon and increasing air pollution.
