Invest in Nuclear

The California energy grid has made an impressive shift towards renewables. Unfortunately, this comes with the intermittency of renewables while grid-scale energy storage remain uninstalled. As the shift towards renewables continues, Nuclear provides the only non-GHG emitting base load option that is already deployed at scale.

We should be working towards increasing our Nuclear generation capacity, but in the meantime, closing Diablo Canyon would be a massive step in the wrong direction and drive the need for even more fossil-based base load.

Keep Diablo Canyon operational.
