Keep Diablo Canyon Open

We need to keep Diablo Canyon Open for 10 more years in order to ensure that California has sufficient power. Keeping an existing nuclear power plant open creates very little extra contaminated material and it will hopefully give enough time for battery power and other non-fossil fuel power sources to develop to provide us with the necessary energy for our economy. Closing Diablo Canyon would be a huge burden on our minority and lower income citizens because it will result in higher energy costs and reduced energy supplies when people are home from their jobs.
