Docket Number: 21-ESR-01

SHUT IT DOWN

Please shut down the Diablo Canyon nuclear power plant as soon as possible. Nuclear power is unsafe, PG&E has a terrible safety record, and Diablo Canyon is next to an earthquake fault. It's incredibly dangerous.

We must reject the argument that we need every possible source of generation. Please watch the Clean Coalition's webinar that took place in January 2021 with Loretta Lynch. She is a former president of the CPUC, who has compiled extensive documentation regarding the causes of the August 2020 blackouts. She has shown that the California ISO was allowing substantial exports of electricity, from California to other states, during our time of greatest need. We had enough resources, but we were exporting electricity to other states that didn't have any shortage at the time. Furthermore, some existing sources of electricity were allowed to be shut down even though California had paid for them to be available during emergencies.

Again, please shut down Diablo Canyon, and please stop allowing energy exports during periods of high demand and reduced supply.
